Provincial Overview

Alberta Map by Zone

AHS is organized into five geographic zones: South, Calgary, Central, Edmonton and North. Zones enable local decision-making and enhance our ability to listen and respond to local communities, staff members, patients and clients. Province-wide services, such as ambulance services, population and public health, Indigenous health, diagnostic imaging and quality and safety, work together with the zones to deliver care across the province.

Population (2021)	
Alberta	4,442,888
North Zone	474,696
Edmonton Zone	1,451,927
Central Zone	476,092
Calgary Zone	1,727,705
South Zone	312,255

Note: The provincial total includes residents not attached to a local geographic area; zones may not sum to Alberta total.

Population Demographics

Population

4,442,888 people lived in Alberta in 2021

Population Projections

Aging Population

1 in 7 of the population were 65+ in 2021

Aging Population Projections

Median Age

Life Expectancy

2020 (age in years)

Source: Alberta Health Interactive Health Data Application (IHDA) as of April 26, 2022.

Service Delivery Information

South Zone Quick Facts

The table below provides a snapshot of South Zone activity and demonstrates service level changes over the last few years.

	2018-19	2019-20	2020-21	2021-22
Population Statistics				
Overall Population	307,033	308,924	311,514	312,255
Aging Population (over 65)	48,662	50,362	52,332	54,276
Life Expectancy	80.5	81.1	79.7	78.8
Median Age	37	38	37	38
Primary Care / Population Health				
Ambulatory Care Visits	461,425	455,409	335,133	345,999
Number of Unique/Individual Home Care Clients	12,837	13,259	12,668	13,146
Number of People Placed in Continuing Care	908	870	947	983
Health Link Calls*	30,306	37,182	72,671	--
Health Link Calls Received – Clinical*	--	--	--	57,217
Health Link Calls Received – Non-Clinical*	--	--	--	47,114
Seasonal Influenza Immunizations	95,240	101,651	98,286	80,817
Food Safety Inspections	4,926	3,557	1,951	2,521
Acute Care				
Emergency Department Visits (all sites)	189,864	194,338	153,843	181,873
Hospital Discharges	29,148	28,692	26,291	27,311
Births	3,692	3,671	3,587	3,468
Total Hospital Days	220,260	216,396	183,276	187,437
Average Length of Stay (in days)	7.6	7.5	7.0	6.9
Diagnostic / Specific Procedures				
Hip Replacements (scheduled and emergency)	583	619	547	639
Knee Replacements (scheduled and emergency)	830	821	758	806
Cataract Surgery	3,105	3,080	3,165	3,285
Main Operating Room Activity	21,823	20,580	18,881	18,844
MRI Exams	14,513	15,333	14,857	14,599
CT Exams	31,640	32,976	36,574	39,312
X-rays	163,170	162,798	135,836	153,527
Lab Tests	5,473,081	5,619,546	5,018,655	5,334,916
Cancer Care				
Cancer Patient Visits (patients may have multiple visits)	32,437	35,948	41,189	45,109
Unique/Individual Cancer Patients	3,045	3,183	3,523	3,832
Addiction and Mental Health				
Mental Health Hospital Discharges (acute care sites)	2,316	2,527	2,410	2,274
Workforce				
AHS Physicians	596	556	656	601
AHS Staff	7,308	7,284	7,501	7,696
AHS Volunteers	1,435	1,663	1,381	688

Data updated as of May 13, 2022. Definitions can be found at <https://www.ahs.ca/about/Page11905.aspx>.

*The measure "Health Link Calls" is no longer being reported because Health Link has expanded their services and this measure no longer represents the Health Link business. This measure was changed as of 2021-22 Q1 to four separate measures: 1) "Health Link Calls Received - Clinical", 2) "Health Link Calls Received - Non-Clinical", 3) "Health Link Outbound Calls - Clinical", and 4) "Health Link Outbound Calls - Non-Clinical". Data for the measure "Health Link Outbound calls" (clinical and non-clinical) are only available at a provincial level.

Calgary Zone Quick Facts

The table below provides a snapshot of Calgary Zone activity and demonstrates service level changes over the last few years.

	2018-19	2019-20	2020-21	2021-22
Population Statistics				
Overall Population	1,669,272	1,696,765	1,710,560	1,727,705
Aging Population (over 65)	200,478	211,374	225,072	237,177
Life Expectancy	83.0	83.7	82.6	82.5
Median Age	37	38	38	38
Primary Care / Population Health				
Ambulatory Care Visits	2,663,827	2,764,235	2,434,524	2,535,449
Number of Unique/Individual Home Care Clients	35,881	37,305	36,480	37,855
Number of People Placed in Continuing Care	2,668	2,757	2,399	2,839

Performance Metrics

Summary of Results	11
Results Summary Dashboard	12
Percentage Placed in Continuing Care within 30 Days	13
Alternate Level of Care Days	14
Unplanned Mental Health Readmissions	15
Patient Satisfaction with Hospital Experience	16
MyAHS Connect Portal Users	17
Percentage of Scheduled Cataract Surgeries Performed Within CIHI Benchmark	18
Percentage of Scheduled Hip Surgeries Performed Within CIHI Benchmark.....	19
Percentage of Scheduled Knee Surgeries Performed Within CIHI Benchmark.....	20
Total Alberta Residents Who Received a COVID-19 Vaccination.....	21
Hand Hygiene Compliance.....	22
Ambulatory Care Sensitive Conditions Hospitalization Rate	23
Workforce Engagement Rate	24
Disabling Injury Rate	25
Annual Rate of Change in Operational Expenditures	26
Cost of a Standard Hospital Stay	27
Acute Length of Stay Compared to Expected Length of Stay	28
30-day Overall Unplanned Readmissions	29

Summary of Results

The 17 AHS performance metrics are reported as follows:

- Twelve indicators include current data to the end of Q4 with comparable historical data.
 - One measure (*Annual Rate of Change in Operational Expenditures*) has a numerical target.
- Four indicators are lagged by one quarter (Q3).
 - One indicator (*Patient Satisfaction*) relies on patient follow-up after they have been discharged from care.
 - Two indicators (*Unplanned Medical Readmissions* and *Unplanned Mental Health Readmissions*) rely on readmission data up to 30 days following discharge which may occur after the quarter ends.
 - One indicator (*Disabling Injury Rate*) relies on employee reporting that may occur retroactively after the quarter ends.
- One indicator (*Workforce Engagement*) is reported when it becomes available, following a scheduled organization-wide survey.

When compared to the 2021-22 target:

- The Annual Rate of Change in Operational Expenditures achieved target.

When compared to the same period last year:

- 7 of 15 performance metrics (47%) have shown improvement.
 - Percentage Placed in Continuing Care Within 30 Days
 - Percentage of Alternate Level of Care (ALC) Patient Days
 - MyAHS Connect Portal Users
 - Percentage of Scheduled Cataract Surgeries Performed Within CIHI Benchmark
 - Total Alberta Residents Who Received COVID-19 Vaccination (at least the first dose)
 - Disabling Injuries in AHS Workforce
 - AHS Estimated Cost of a Standard Hospital Stay
- 5 of 15 performance metrics (33%) remained stable (≤ 3 per cent change).
 - Patient Satisfaction with Hospital Experience
 - Percentage of Scheduled Hip Surgeries Performed Within CIHI Benchmark
 - Hand Hygiene Compliance Rate
 - Acute Length of Stay Compared to Expected Length of Stay (ALOS:ELOS)
 - 30-day Overall Unplanned Readmissions (medical, surgical, pediatric and obstetric)
- 3 of 15 performance metrics (20%) have shown deterioration or slowed progress.
 - **Unplanned Mental Health Readmissions** – Alberta remains better than the national average for this measure. The national data also shows an increasing trend in mental health readmissions across most provinces. The impacts of COVID-19 may be contributing to this change. Emerging research is showing that the pandemic has had significant mental health impacts in some populations, youth in particular, and AHS saw increased emergency and inpatient utilization for AMH concerns throughout most of 2021. Current initiatives to expand access to community services are underway, which are expected to reduce pressures in this area and readmissions will be monitored as part of ongoing assessment of performance
 - **Percentage of Scheduled Knee Surgeries Performed Within CIHI Benchmark** – AHS is grateful for the patience of all Albertans who had their surgeries delayed as we took necessary steps to ensure our healthcare delivery system was prepared to respond to COVID-19. Decreasing wait times continues to be a priority for Alberta, and ASI strategies to improve wait times will be embedded throughout surgery recovery planning and implementation. Additional investments for these procedures is also occurring through the ASI including an expansion of orthopedic procedures including hip and knee arthroplasty through chartered surgical facilities.
 - **Ambulatory Care Sensitive Conditions (ACSC) Hospitalization Rate** – Creating a more integrated healthcare delivery system ensures that care is provided in the right setting. The increase in hospitalizations for ACSCs, when compared to the same period last year, may be due to multiple factors including overall lower hospital volumes in 2020-21 starting to recover in 2021-22. This increase might also be the result of Albertans not seeking timely care during earlier stages of the COVID-19 pandemic which contributes to exacerbated conditions and higher acuity when presenting for care.

The following pages provide detailed information for each performance metric.

Results Summary Dashboard

Year-end results for AHS' performance metrics are summarized below. Results are reported as 'improved' if there is a three per cent or greater relative change in a desirable direction when compared to the same time period last year; 'deteriorated' if the three per cent or greater relative change is in an undesirable direction; otherwise, results are reported as 'stable'.

Goal 1: Improve the Experiences of Patients and Families

65.6% of people placed in **continuing care** within 30 days

Result: Improved

13.3% of beds used by **alternate level of care** patients

Result: Improved

12.6% of **mental health** patients **readmitted** to hospital within 30 days

Result: Deteriorated (Q3YTD)

65.7% of patients **satisfied** with their **hospital experience**

Result: Stable (Q3YTD)

95,101 users registered on **MyAHS Connect Portal**

Result: Improved¹

Goal 2: Improve Patient and Population Health Outcomes

51.1% of **hip surgeries** performed within 182 days

Result: Stable

39.7% of **knee surgeries** performed within 182 days

Result: Deteriorated

64.2% of **cataract surgeries** performed within 112 days

Result: Improved

3,583,790 Albertans received at least one dose of **COVID-19 vaccine**

Result: Improved¹

244 hospitalizations per 100k residents for **ambulatory care sensitive conditions**

Result: Deteriorated

92% **hand hygiene compliance** rate for AHS healthcare workers

Result: Stable

Goal 3: Improve the Experience and Safety of our People

3.57 out of 5 AHS employee engagement rate

Result: Improved² (2019-20)

4.56 disabling injuries per 200,000 paid hours

Result: Improved (Q3YTD)

Goal 4: Improve Financial Health and Value for Money

2.2% change in annual AHS operational expenditure³

Achieved target (3.9%)

\$9,172 per standard hospital stay (AHS estimated)

Result: Improved

0.99 ratio of acute inpatient days to the expected length of stay

Result: Stable

9.2% of patients⁴ readmitted to hospital within 30 days

Result: Stable (Q3YTD)

1. This is a cumulative measure; result indicates continuous increase over time
2. Compares 2019-20 to 2016-17 survey
3. Excludes incremental COVID-19 related expenses
4. Includes medical, surgical, pediatric and obstetrical patients

PERCENTAGE PLACED IN CONTINUING CARE WITHIN 30 DAYS

Measure Definition:

The percentage of clients admitted to a continuing care living option (designated supportive living levels 3, 4, 4-dementia or long-term care) within 30 days of being assessed and approved for placement.

Why It's Important:

This measure monitors the percentage of people who move from hospitals and communities into community-based continuing care settings. The higher the percentage the better, as it demonstrates availability of long-term care or designated supportive living beds.

Performance Summary:

65.6%

Notes:

Results are reported as "improved" if there is a 3% or greater relative change in a desirable direction when compared to the same time period last year; "deteriorated" if the 3% or greater relative change is in an undesirable direction; otherwise results are reported as "stable".

PERCENTAGE OF ALTERNATE LEVEL OF CARE PATIENT DAYS

Measure Definition:

The percentage of acute care days occupied by patients waiting for discharge to a more appropriate care setting.

Why It's Important:

If the percentage of ALC days is high, there may be a need to focus on timely access to appropriate levels of care for ALC patients. Discharging patients who are no longer acutely ill or no longer need hospital care would free up space for acutely ill patients, as well as ensure discharged patients receive the care they need. For example, patients may be waiting for placement into long-term care or other community-based care, and there may be a need to focus on timelier placement. Therefore, the lower the percentage the better.

Performance Summary:

13.3%

Notes:

- Results may change due to data updates in the source information system or revisions to the measure's inclusion and exclusion criteria.
- Historical data from the Queen Elizabeth II Hospital is now reported under the Grande Prairie Regional Hospital.
- Results are reported as "improved" if there is a 3% or greater relative change in a desirable direction when compared to the same time period last year; "deteriorated" if the 3% or greater relative change is in an undesirable direction; otherwise results are reported as "stable".

UNPLANNED MENTAL HEALTH READMISSIONS

Measure Definition:

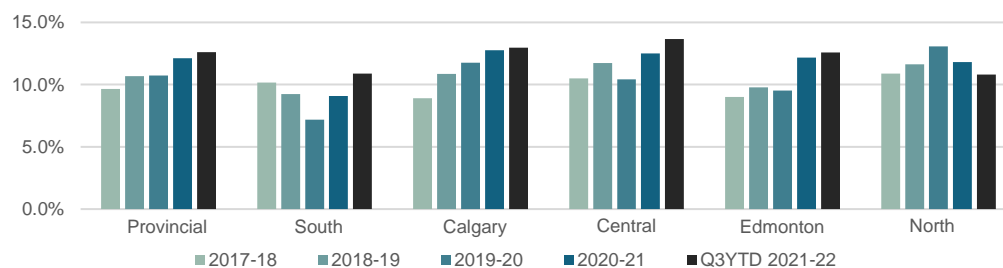

The percentage of occurrences of a non-elective (unplanned) readmission to an acute care hospital for selected mental illnesses within 30 days of a patient being discharged for any of the selected mental illnesses.

Why It's Important:

Hospital care for mental illnesses aims to stabilize acute symptoms with subsequent care and support being provided through outpatient and community programs. Monitoring readmissions can help evaluate the appropriateness of discharges and follow-up community care. The lower the percentage the better, as it demonstrates fewer patients are being readmitted after discharge.

Performance Summary:

Source: AHS Provincial Discharge Abstract Database (DAD), as of April 29, 2022.

Notes:

- This indicator is reported a quarter later due to requirements to follow-up with patients after the end of the reporting quarter.
- This indicator measures the risk-adjusted rate of readmission to hospital for patients discharged with selected mental illnesses.
- The methodology is adapted from the 2015 CIHI methodology and uses a constant 2018-19 Canadian average rate for adjustment calculations. Historical data has been restated using this methodology.
- Results are reported as "improved" if there is a 3% or greater relative change in a desirable direction when compared to the same time period last year; "deteriorated" if the 3% or greater relative change is in an undesirable direction; otherwise results are reported as "stable".

PATIENT SATISFACTION WITH HOSPITAL EXPERIENCE

Measure Definition:

The percentage of patients rating hospital care experience as 9 or 10 on a scale from 0-10, where 10 is the best possible rating. The survey is conducted by telephone on a sample of adults within six weeks of discharge from acute care facilities.

Why It's Important:

Gathering feedback from individuals using hospital services is a critical part of improving the health system. This measure reflects patients' overall perceptions associated with the hospital where they received care. The higher the percentage the better, as it demonstrates more patients are satisfied with their care experience in hospital.

Notes:

- The results are reported a quarter late due to requirements to follow-up with patients after the end of the reporting quarter.
- The margins of error were calculated using an estimated normal distribution for sample sizes greater than 10. If the sample size was less than 10, the plus two & plus four methods were used.
- Provincial and zone level results are based on weighted data; Facility level results and All Other Hospitals results are based on unweighted data.
- Historical data from the Queen Elizabeth II Hospital is now reported under the Grande Prairie Regional Hospital.
- Results are reported as "improved" if there is a 3% or greater relative change in a desirable direction when compared to the same time period last year; "deteriorated" if the 3% or greater relative change is in an undesirable direction; otherwise results are reported as "stable".

MYAHS CONNECT PORTAL USERS

Measure Definition:

The number of active Connect Care accounts being accessed via the MyAHS Connect Portal.

Why It's Important:

MyAHS Connect is a patient portal that offers personalized and secure online access to a person's provincial health record. This allows Albertans to be active participants in their care and supports informed decision making with the care team. The higher the number the better, as it demonstrates more Albertans have access to the portal and can be more involved in their care and decision making.

Performance Summary:

95,101

users

Provincial
2021-22

Result: **Improved**
(Compared to the last reporting period)

Source: AHS Connect Care dashboard: MyAHSConnect Patient Experience Dashboard, as of April 6, 2022.

Notes:

- Connect Care launched in Edmonton Zone in November 2019. Prior data is not available.
- This is a cumulative measure that will continuously increase over time.
- Results are reported as "improved" if there is a 3% or greater relative change in a desirable direction when compared to the same time period last year; "deteriorated" if the 3% or greater relative change is in an undesirable direction; otherwise results are reported as "stable".

PERCENTAGE OF SCHEDULED CATARACT SURGERIES PERFORMED WITHIN CIHI BENCHMARK

Measure Definition:

The percentage of scheduled cataract surgeries performed within clinically recommended timeframes, using the Canadian Institute for Health Information (CIHI) benchmark of 112 days. The wait time interval used for comparison with the benchmark is the time a patient is assessed by a specialist as medically, physically able and willing to receive surgery to the date the surgery is performed.

Why It's Important:

AHS is committed to ensuring that all Albertans receive timely access to sustainable surgical services without compromising safety and quality. Performing surgeries within recommended timeframes support improved health outcomes and patient satisfaction. The higher the percentage the better, as it demonstrates more procedures are being completed within clinically recommended timeframes.

Performance Summary:

64.2%

Source: Data extracted from hospital operation room data: PICIS, VAX, Meditech, the Alberta Wait Times Reporting (AWTR) website, and Surgical Facilities Contracts (Bill 11) database, as of April 26, 2022.

Notes:

- Data include elective and scheduled cases for first eyes only.
- Data include surgeries performed within Alberta Health Services (including faith-based sites) and at contracted surgical facilities.
- Calgary Zone data for 2021-22 may be incomplete because of a delay in receiving complete contracted surgical facility data.
- Surgical volumes and wait times were impacted by COVID-19 in 2020-21 and 2021-22.
- Results are reported as "improved" if there is a 3% or greater relative change in a desirable direction when compared to the same time period last year; "deteriorated" if the 3% or greater relative change is in an undesirable direction; otherwise results are reported as "stable".

PERCENTAGE OF SCHEDULED HIP SURGERIES PERFORMED WITHIN CIHI BENCHMARK

Measure Definition:

The percentage of scheduled hip replacement surgeries performed within clinically recommended timeframes, using the Canadian Institute for Health Information (CIHI) benchmark of 182 days. The wait time interval used for comparison with the benchmark is the time a patient is assessed by a specialist as medically, physically able and willing to receive surgery to the date the surgery is performed.

Why It's Important:

AHS is committed to ensuring that all Albertans receive timely access to sustainable surgical services without compromising safety and quality. Performing surgeries within recommended timeframes support improved health outcomes and patient satisfaction. The higher the percentage the better, as it demonstrates more procedures are being completed within clinically recommended timeframes.

North Zone	252	290	324	314	234

Source: Data extracted from hospital operating room data: PICIS, VAX, Meditech Operating Room Module and Alberta Wait Time Reporting, as of April 26, 2022.

Notes:

- Data include elective and scheduled cases only.
- Data include surgeries performed within Alberta Health Services (including faith-based sites) and at contracted surgical facilities.
- Surgical volumes and wait times were impacted by COVID-19 in 2020-21 and 2021-22.
- Results are reported as "improved" if there is a 3% or greater relative change in a desirable direction when compared to the same time period last year; "deteriorated" if the 3% or greater relative change is in an undesirable direction; otherwise results are reported as "stable".

PERCENTAGE OF SCHEDULED KNEE SURGERIES PERFORMED WITHIN CIHI BENCHMARK

Measure Definition:

The percentage of scheduled knee replacement surgeries performed within clinically recommended timeframes, using the Canadian Institute for Health Information (CIHI) benchmark of 182 days. The wait time interval used for comparison with the benchmark is the time a patient is assessed by a specialist as medically, physically able and willing to receive surgery to the date the surgery is performed.

Why It's Important:

AHS is committed to ensuring that all Albertans receive timely access to sustainable surgical services without compromising safety and quality. Performing surgeries within recommended timeframes support improved health outcomes and patient satisfaction. The higher the percentage the better, as it demonstrates more procedures are being completed within clinically recommended timeframes.

Performance Summary:

39.7%
Provincial
2021-22
Result: **Deteriorated**
(Compared to the same period last year)

TOTAL NUMBER OF ALBERTANS WHO RECEIVED COVID-19 VACCINATION (AT LEAST THE FIRST DOSE)

Measure Definition:

A cumulative count of Albertans who have received at least one dose of the COVID-19 vaccine by the reporting date.

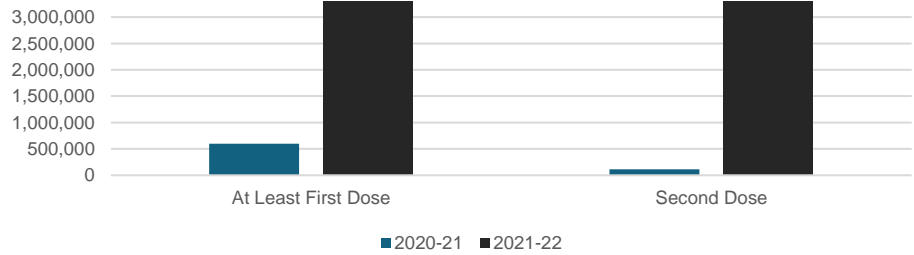

Why It's Important:

An effective vaccine will protect someone who receives it by lowering the chance of getting COVID-19 and/or providing protection against severe illness if the person encounters the coronavirus. The higher the number the better, as it demonstrates better vaccination coverage across the province.

Performance Summary:

3.58 M
people
Provincial
2021-22

Result: **Improved**

Total Number of Albertans Who Received COVID-19 Vaccination - Trend

Zone		2020-21	2021-22	Result
Provincial	At Least First Dose	596,114 (13.5%)	3,583,790 (81.1%)	Improved
	Second Dose	114,695 (2.6%)	3,386,054 (76.6%)	Improved

Source: Data was extracted from Imm/ARI by Alberta Health as of June 6, 2022.

Notes:

- This is a cumulative measure; trend indicates continuous increase in vaccine uptake.
- At Least First Dose refers to people who have received the first dose only plus those who received the first and second dose. Second Dose refers to people who have received both doses.
- Results include vaccinations that took place in AHS sites and non-AHS sites (i.e., pharmacies, doctor's offices, etc.)
- The total population in Alberta was used as the denominator for the calculation of the percentage.
- Results are reported as "improved" if there is a 3% or greater relative change in a desirable direction when compared to the same time period last year; "deteriorated" if the 3% or greater relative change is in an undesirable direction; otherwise results are reported as "stable".

HAND HYGIENE COMPLIANCE

Measure Definition:

The percentage of opportunities in which healthcare workers clean their hands during the course of patient care. Healthcare workers are directly observed for compliance with hand hygiene practices according to the Canadian Patient Safety Institute's four moments of hand hygiene.

Why It's Important:

Hand hygiene is the single most effective strategy to reduce the transmission of infection in the healthcare setting. The higher the percentage the better, as it demonstrates more healthcare workers are complying with appropriate hand hygiene practices.

Performance Summary:

92%
Provincial
2021-22

Result: **Stable**
(Compared to the same period last year)

Source: AHS IPC Surveillance and Standards, as of May 18, 2022; Covenant Health Infection Prevention and Control, as of April 5, 2022.

Notes:

- Covenant Health sites (Misericordia Community Hospital and Grey Nuns Community Hospital) use different methodologies for capturing and computing hand hygiene compliance. These are available twice a year in spring (Q1) and fall (Q3). These are not included in the Edmonton Zone and Provincial totals.
- "Other Sites" include any hand hygiene observations collected at an AHS operated program, site, or unit including acute care, continuing care, and ambulatory care settings such as Cancer Care Alberta, Corrections, EMS, Hemodialysis, Home Care, and Public Health.
- Hand hygiene data reporting for 2020/21-Q1 was suspended due to the interruption of data collection activities during the COVID-19 pandemic.
- Queen Elizabeth II Hospital acute care moved to Grande Prairie Regional Hospital in December 2021, data in Q4 2021-22 only includes ambulatory care in Queen Elizabeth II Hospital, and hand hygiene data for Grande Prairie Regional Hospital acute care are not available.
- Results are reported as "improved" if there is a 3% or greater relative change in a desirable direction when compared to the same time period last year; "deteriorated" if the 3% or greater relative change is in an undesirable direction; otherwise results are reported as "stable".

AMBULATORY CARE SENSITIVE CONDITION (ACSC) HOSPITALIZATION RATE

Measure Definition:

The age-standardized hospitalization rate per 100,000 Alberta residents for conditions where appropriate ambulatory care could potentially prevent or reduce the need for admission to hospital.

Why It's Important:

Appropriate care leads to better overall patient health as well as better utilization of resources by avoiding unnecessary hospitalizations. The lower the rate the better, as it demonstrates effective primary care and community-based management of these conditions.

Performance Summary:

244
per 100,000 residents
Provincial
2021-22
Result: **Deteriorated**
(Compared to the same period last year)

ACSC Hospitalization Rate (annualized) - Trend

Zone	2017-18	2018-19	2019-20	2020-21	2021-22	Result
Provincial	333	317	308	231	244	Deteriorated

Central Zone	2,084	1,966	1,962	1,429	1,449
Edmonton Zone	3,505	3,607	3,701	2,786	3,182
North Zone	2,154	2,127	1,969	1,644	1,563

Source: AHS Provincial Discharge Abstract Database (DAD), Alberta Health Population Estimate database, as of May 2, 2022, and Postcensal Canadian population estimate (2011) – Statistics Canada (Standard population).

Notes:

- Results may change due to data updates in the source information system or revisions to the measure's inclusion and exclusion criteria.
- Zone separation is based on residency zone, not facility zone.
- Provincial total hospitalizations include those with unknown zone records.
- The rate is age-standardized to the 2011 Canadian population and represents the number of ACSC hospitalizations that would be expected per 100K population if the age distribution of Alberta residents was similar to the Canadian population in 2011.
- Results are reported as "improved" if there is a 3% or greater relative change in a desirable direction when compared to the same time period last year; "deteriorated" if the 3% or greater relative change is in an undesirable direction; otherwise results are reported as "stable".

AHS WORKFORCE ENGAGEMENT

Measure Definition:

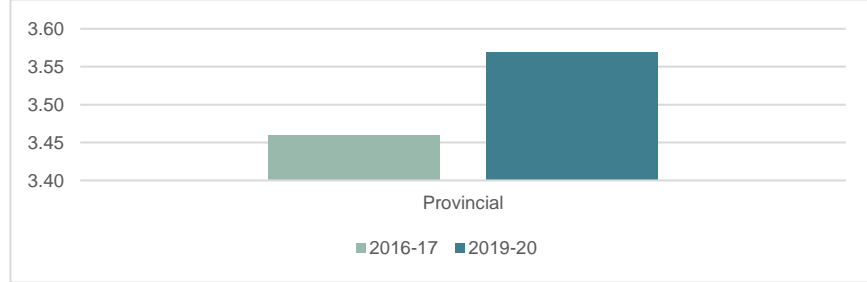

AHS' Our People Survey uses a five-point scale (with "1" meaning "strongly disagree" and "5" meaning "strongly agree"), to help respondents rate their level of agreement with 12 (Q12) individual statements related to workforce engagement. This measure reports the "Grand Mean" and highlights AHS' overall engagement. It is the overall average of the average scores received for the individual Q12 items. The Grand-Mean uses the same five-point scale as the individual Q12 statements.

Why It's Important:

Engagement scores measure the extent to which people feel they have direction, clarity, encouragement and growth opportunities they need to perform at their best. It reflects how committed an employee is to the organization, their role, their manager, and co-workers. High engagement leads to higher productivity, safer patient care, and increased willingness to give discretionary effort at work. The higher the rate the better, as it demonstrates that more employees feel positive about their work and workplace.

Performance Summary:

3.57
out of 5
Provincial
2019-20

Our People Survey Results

Level of Portfolio	Portfolio or Departments	2016-17	2019-20
Province	Provincial	3.46	3.57

Source: AHS People portfolio

Notes:

- Workforce engagement rate is specific to AHS Employees only, and excludes physicians, volunteers, and midwives.
- The next survey is scheduled for 2022-23.

DISABLING INJURIES IN AHS WORKFORCE

Measure Definition:

The number of AHS workers requiring modified work or time away from work per 200,000 paid hours (approximately 100 full time equivalent workers).

Why It's Important:

The disabling injury rate enables us to identify workplace health and safety programs that will provide AHS employees, volunteers and physicians with a safe and healthy work environment and keep them free from injury. The lower the rate the better, as it demonstrates fewer disabling injuries are occurring at work.

Performance Summary:

4.56
per 200,000 paid hours
Provincial
Q3YTD 2021-22
Result: **Improved**
(Compared to the same period last year)

Notes:

- This measure is reported one quarter later to allow for more accurate reporting as injuries sustained within the quarter are often reported retroactively outside the quarter.
- Reporting of "0.00" is accurate and reflects these portfolios having no disabling injuries.
- Results are reported as "improved" if there is a 3% or greater relative change in a desirable direction when compared to the same time period last year; "deteriorated" if the 3% or greater relative change is in an undesirable direction; otherwise results are reported as "stable".

ANNUAL RATE OF CHANGE IN OPERATIONAL EXPENDITURES

Measure Definition:

The year-over-year percentage change in operational expenditures excluding COVID-19 related expenses.

Why It's Important:

Being a single, integrated healthcare system puts AHS in a unique position to support system sustainability, and being good fiscal stewards of healthcare-allocated tax dollars has always been a priority. A provincial approach will enable consistency and sharing of successes and lessons to ensure the most efficient method to managing all operational expenditures. The lower the percentage the better, as it demonstrates lower expenditure growth over time.

Performance Summary:

2.2%
Provincial
2021-22
Result: **Achieved target**

Annual Rate of Change in Operational Expenditures (excluding COVID-19 expense) - Trend

Zone	2017-18	2018-19	2019-20	2020-21	2021-22	2021-22 Target

Source: AHS Annual Audited Consolidated Financial Statements, External Financial Reporting, Finance, AHS general ledger (e-Manager), as of June 01, 2022.

Notes:

- AHS' Consolidated Expenses include subsidiaries and other controlled entities.
- This measure reflects AHS operational expenditures only.

AHS ESTIMATED COST OF A STANDARD HOSPITAL STAY

Measure Definition:

The ratio of a hospital's total acute inpatient care expenses to the number of acute inpatient cases, adjusting for differences in the type and acuity of inpatients the hospital treats.

Why It's Important:

Acute care hospitals are one of the most expensive sectors of the healthcare system. The goal is to provide safe, high-quality care while keeping costs down. The lower the amount the better, as it demonstrates a more cost-efficient acute care system, which maintains quality and safety of care while reducing costs.

Performance Summary:

\$9,172

Provincial
2021-22

Result: **Improved**
(Compared to the same period last year)

North Zone	43,592	40,768	41,742	37,969	38,663

Source: AHS Provincial Discharge Abstract Database (DAD), AHS General Ledger, Covenant General Ledger and Stat General Ledger, as of April 29, 2022

Note:

- This indicator is calculated by dividing the zone's total inpatient cost by its total acute inpatient weighted cases (obtained from the Discharge Abstract Database).
- 2021-22 values may change upon finalized fiscal year finance data.
- The CIHI Case Mix Groups+ (CMG+) methodology is designed to aggregate acute care in-patients with similar clinical and resource-utilization characteristics. It is applied to the acute care inpatient cases to improve estimates of resource indicators, such as Resource Intensity Weights (RIW). Therefore, implementation of CIHI's 2021 CMG resulted in some changes to the number of RIW Cases and the Cost of a Standard Hospital Stay for historical fiscal years.
- Note that the methodology used by AHS is different than that of the Canadian Institute for Health Information resulting in slight differences between the sources.
- Results are reported as "improved" if there is a 3% or greater relative change in a desirable direction when compared to the same time period last year; "deteriorated" if the 3% or greater relative change is in an undesirable direction; otherwise results are reported as "stable".

ACUTE LENGTH OF STAY COMPARED TO EXPECTED LENGTH OF STAY (ALOS:ELOS)

Measure Definition:

The ratio of the total number of acute days in acute care hospitals compared to the total acute length of stay that is expected based on factors such as patient age, diagnoses, and interventions.

Why It's Important:

To improve system-wide health services delivery, it is important to manage the length of time patients remain in hospital and improve discharge and transition from acute care to primary and community care to ensure the most efficient utilization of hospital beds.

Performance Summary:

0.99

Provincial
2021-22

Result: **Stable**

Source: AHS Provincial Discharge Abstract Database (DAD), as of April 29, 2022

Notes:

- Results are for typical cases only (ones that follow a usual course of treatment) and may change due to data updates in the source information system.
- Implementation of CIHI's 2021 Case Mix Groups (CMG) grouper resulted in some changes to the number of total typical discharges and ALOS:ELOS for historical fiscal years.
- Historical data from the Queen Elizabeth II Hospital is now reported under the Grande Prairie Regional Hospital.
- Results are reported as "improved" if there is a 3% or greater relative change in a desirable direction when compared to the same time period last year; "deteriorated" if the 3% or greater relative change is in an undesirable direction; otherwise results are reported as "stable".

OVERALL UNPLANNED READMISSIONS

Measure Definition:

The percentage of patients with unplanned readmission to hospital within 30 days of leaving for medical, surgical, pediatric or obstetric care.

Why It's Important:

Readmission rates can be influenced by the quality of care provided, the effectiveness of the care transitions and coordination, and the availability and use of community programs. Monitoring these rates can help evaluate the appropriateness of discharges and follow-up care. The lower the percentage the better, as it demonstrates more effective discharge planning and follow-up care in the community.

Performance Summary:

Source: CIHI Your Health System: Insight, as of April 25, 2022

Notes:

- This measure is reported one quarter later due to requirements to follow up with patients after end of reporting quarter.
- Results were adjusted by using the Canadian average rate of the Overall Readmission in 2018-19.
- Before 2020-21 FY, data for Stollery Children's Hospital was combined with University of Alberta Hospital; Starting 2020-21 FY, Stollery Children's Hospital and University of Alberta Hospital are separately reported.
- Historical data from the Queen Elizabeth II Hospital is now reported under the Grande Prairie Regional Hospital.
- Results are reported as "improved" if there is a 3% or greater relative change in a desirable direction when compared to the same time period last year; "deteriorated" if the 3% or greater relative change is in an undesirable direction; otherwise results are reported as "stable".

Monitoring Measures

There are a number of measures AHS tracks to help inform performance across the healthcare delivery system. These measures include a broad range of indicators that span the continuum of care, such as population and public health, primary care, continuing care, mental health, cancer care, emergency departments and surgery.

Data was updated as of May 13, 2022.

Definitions can be found online at <https://www.albertahealthservices.ca/about/Page12640.aspx>.

LIFE EXPECTANCY	2018	2019	2020	2021
<i>The number of years a person would be expected to live, starting at birth, on the basis of mortality statistics.</i>				
Provincial	81.9	82.3	81.2	80.6
Females	84.3	84.4	83.7	83.4
Males	79.6	80.3	78.9	77.9
First Nations	70.9	70.3	66.7	63.2
Non-First Nations	82.3	82.8	81.9	81.4

POTENTIAL YEARS OF LIFE LOST	2018	2019	2020	2021
<i>The total number of years not lived (per 1,000 population) by an individual who died before their 75th birthday.</i>				
Both	50.7	47.1	56.3	62.1
Females	37.2	35.5	41.2	44.0
Males	63.8	58.4	70.9	79.5

PERINATAL MORTALITY RATE BY POPULATION (single year)	2018	2019	2020	2021
<i>The number of full-term stillbirths and infants up to 7-days of age divided by the number of live births and stillbirths multiplied by 1,000.</i>				
Provincial	5.62	5.25	5.78	5.34
First Nations	7.51	11.09	14.29	13.72
Non-First Nations	5.49	4.90	5.24	5.01
Rate Gap	2.02	6.19	9.05	8.71

PERINATAL MORTALITY RATE BY POPULATION (three-year average)	2016-2018	2017-2019	2018-2020	2019-2021
<i>The number of full-term stillbirths and infants up to 7-days of age divided by the number of live births and stillbirths multiplied by 1,000.</i>				
First Nations	8.71	9.19	10.89	12.97
Non-First Nations	5.06	5.26	5.21	5.04
Rate Gap	3.65	3.93	5.68	7.93

EMERGENCY DEPARTMENT (ED)	2018-19	2019-20	2020-21	2021-22
Total Number of ED Visits (all sites)	2,056,631	2,062,528	1,552,096	1,824,116
Percentage of Patients Treated and Admitted to Hospital Within 8 Hours (all sites)	45.4%	42.9%	44.3%	38.6%
Percentage of Patients Treated and Admitted to Hospital Within 8 Hours (busiest sites)	37.9%	35.9%	38.0%	33.1%
Percentage of Patients Treated and Discharged Within 4 Hours (all sites)	74.4%	72.2%	71.8%	65.5%
Percentage of Patients Treated and Discharged Within 4 Hours (busiest sites)	58.7%	55.1%	57.5%	47.2%
ED Time to Physician Initial Assessment (median) (busiest sites) (in hours)	1.4	1.6	1.1	1.7
Percentage of Patients Left Without Being Seen and Against Medical Advice	4.5%	5.1%	4.0%	6.1%

ACUTE CARE	2018-19	2019-20	2020-21	
Hospital Discharges	401,208	399,281	358,107	375,960
Acute Care Occupancy: percentage of patient days in hospital compared to available bed days in the reporting period for top 16 AHS sites	96.2%	95.5%	89.2%	92.8%
Hospital-Acquired <i>Clostridium difficile</i> Infection Rate (per 10,000 patient days)	2.5	2.6	2.6	2.4
Hospital Standardized Mortality Ratio (HSMR)	97	98	106	108
Medical Readmissions Within 30 Days (risk adjusted)	13.7%	13.4%	13.5%	13.0% (Q3YTD)
Surgical Readmissions Within 30 Days (risk adjusted)	6.6%	6.5%	6.5%	6.5% (Q3YTD)
Heart Attack in Hospital Mortality Within 30 Days (risk adjusted)	5.7%	6.5%	5.3%	5.8% (Q3YTD)
Stroke in Hospital Mortality Within 30 Days (risk adjusted)	12.4%	12.4%	12.7%	13.3% (Q3YTD)

SURGERY WAIT TIMES in weeks		2018-19	2019-20	2020-21	2021-22
Coronary Artery Bypass Graft (CABG) Ready To Treat (RTT) for Scheduled Surgeries	50 th Percentile (scheduled)	7.0	7.7	9.7	7.5

Percentage of Health Link Calls Answered Within Two Minutes**	74%	60%	49%	--
Health Link Median Wait Time before Calls Answered (Minutes) – Clinical**	--	--	--	11.4
Health Link Median Wait Time before Calls Answered (Minutes) – Non-Clinical**	--	--	--	0.2

* Reporting crude-rate for FPSC.

** The measure "Health Link Calls" and "Percentage of Health Link Calls Answered within Two Minutes" are no longer being reported because Health Link has expanded their services and this measure no longer represents the Health Link business. These measures were changed as of 2021-22 FQ1 to six separate measures: 1) "Health Link Calls Received - Clinical", 2) "Health Link Calls Received - Non-Clinical", 3) "Health Link Outbound Calls - Clinical", 4) "Health Link Outbound Calls - Non-Clinical", 5) Health Link Median Wait Time before Calls Answered (Minutes) – Clinical, and 6) Health Link Median Wait Time before Calls Answered (Minutes) – Non-Clinical. Data for the measure "Health Link Outbound calls" (clinical and non-clinical) are only available at a provincial level.

CHILDRENS MENTAL HEALTH SERVICES	2018-19	2019-20	2020-21	2021-22
Child and Youth Mental Health Wait Times (90 th percentile) (in days)	48.0	55.0	50.0	78.0 (Q3YTD)
Child and Youth Mental Health Wait Times (median) (in days)	14.0	15.0	14.0	20.0 (Q3YTD)

INFLUENZA IMMUNIZATION	2018-19	2019-20	2020-21	2021-22
Seasonal Influenza Immunizations	1,317,659	1,438,682	1,650,836	1,207,099
Seniors (65+ years)	61.2%	61.4%	62.7%	64.5%
Children (6 to 23 months)	40.7%	43.2%	51.7%	46.9%
AHS Healthcare Workers*	67.6%	67.2%	64.8%	35.3%

* Rate excludes Covenant Health. As of 2021-22 FQ4, AHS Employee Seasonal Influenza Immunizations are reported from the annual influenza immunization campaign, "Got My Flue Shot" via WHS or Site Champions. AHS no longer has access to unreported immunizations as was available in previous years through the Alberta Health overlay data.

CHILDHOOD IMMUNIZATION	2018	2019	2020	2021
Childhood Immunization Rate - DTaP-IPV-Hib*	78.1%	78.8%	79.0%	74.8%
Childhood Immunization Rate – MMR*	87.6%	88.0%	88.0%	84.7%

* To align with AH measures, AHS now reports these measures by calendar year.

CANCER SCREENING	2018-19	2019-20	2020-21	2021-22
Breast Cancer Participating Rate	65.2%	60.7%	57.8%	Not available
Colorectal Cancer Participating Rate	55.7%	50.6%	49.9%	Not available
Cervical Cancer Participating Rate	63.6% (2017-19)	60.4% (2018-20)	59.8% (2019-21)	Not available
Early Detection of Cancers	74.5% (2018)	74.6% (2019)	73.9 (2020)	Not available

Note: Cancer screening participation rate measures are lagged by 1 year and data was not available at the time of this report.

CANCER CARE in weeks, 90th percentile	2018-19	2019-20	2020-21	2021-22
Radiation Oncology Access: referral to first consult (from referral to the time of their first appointment with a radiation oncologist)	6.7	7.0	5.6	6.6
Medical Oncology Access: referral to first consult (from referral to the time of their first appointment with a medical oncologist)	6.1	7.0	5.9	6.7
Radiation Therapy Access: ready to treat to first therapy	2.7	2.9	2.9	2.9

Facility Definitions

Facility	Definition
Hospital	<p>Acute Care Hospitals are where active treatment is provided. They include medical, surgery, obstetrics, pediatrics, acute care psychiatric, NICU (neonatal intensive care levels II and III), ICU (includes intensive care unit, coronary care unit, special care unit, etc.), sub-acute, restorative, and palliative beds located in the hospital.</p> <ul style="list-style-type: none"> • Urban hospitals are located in large, densely populated cities and may provide access to tertiary and secondary level care. Some examples of tertiary level care include head and neck oncology, high risk perinatology and neonatology, organ transplantation, trauma surgery, high dose (cancer) radiation and chemotherapy, growth and puberty disorders, advanced diagnostics (i.e., MRI, PET, CT, Nuclear Medicine, Interventional Radiology), and tertiary level specialty clinic services. • Regional hospitals provide access to secondary level care medical specialists who do not have first contact with patients (e.g., cardiologists, urologists, and orthopedic surgeons). In addition to providing general surgery services, these facilities provide specialist surgical services (e.g., orthopedics, otolaryngology, plastic surgery, gynecology) and advanced diagnostics (i.e., MRI, CT). • Community hospitals provide access to rural clinical services – ambulatory, emergency, inpatient medicine, obstetrics and surgery (includes endoscopy). • Standalone Emergency Departments (ED) reflect facilities with an ED and access to lab, diagnostic imaging, and outpatient specialty clinics. They do not have acute care beds or inpatient services. • Ambulatory Endoscopy / Surgical Centre Hospitals (OP) reflect facilities providing ambulatory services including endoscopy and outpatient specialty clinics.
Addiction	Addiction treatment facilities with beds and mats for clients with substance use and gambling problems. These include detoxification, nursing care, assessment, counselling, and treatment through direct services provided by AHS as well as funded and contracted services. This also includes beds for Protection of Children Abusing Drugs (PChAD) program clients and residential beds for young adult treatment.
Community Mental Health	Community Mental Health (CMH) supports home programs, community beds, and other mental health community beds/spaces that deliver both transitional and permanent/long-term services to clients with varying mental health issues. In addition, CMH treats the clients' behavioral, social, physical, and medical needs.
Standalone Psych	Standalone psychiatric facilities: Claresholm Centre for Mental Health and Addictions, Southern Alberta Forensic Psychiatric Centre (Calgary), Centennial Centre for Mental Health and Brain Injury (CCMHBI) (Ponoka), Alberta Hospital Edmonton, and Villa Caritas (Edmonton).
Sub-Acute Care (SAC)	Sub-acute care is provided in an auxiliary hospital for the purpose of receiving convalescent and/or rehabilitation services where it is anticipated that the patient will achieve functional potential to enable them to improve their health status and to successfully return to the community.
Palliative (PEOLC)	Palliative and End-of-Life Care (PEOLC) facilities are where a program or bed is designated for the purpose of receiving palliative care services, (including end-of-life and symptom alleviation) but are not located in an acute care facility. This includes community hospice beds.
Long-Term Care (LTC)	Long-term care is provided in nursing homes and auxiliary hospitals. It is reserved for those with unpredictable and complex health needs, usually multiple chronic and/or unstable medical conditions. Long-term care includes health and personal care services such as 24-hour nursing care provided by registered nurses. In addition, care is also provided by licensed practical nurses.
Designated Supportive Living (DSL)	Designated Supportive Living (DSL) includes comprehensive services such as the availability of 24-hour nursing care (Levels 3 or 4). Designated Supportive Living 4-Dementia and Designated Supportive Living Mental Health is also available for those individuals living with moderate to severe dementia or cognitive impairment. Albertans accessing designated supportive living services generally reside in lodges, retirement communities, or designated supportive living facilities.
Cancer (Ca)	Cancer Care Services include assessments and examinations, supportive care, pain management, prescription of cancer-related medications, education, resource and support counselling, and referrals to other cancer centres.
Ambulatory	<ul style="list-style-type: none"> • Urgent Care Centre (UCC) is a community-based service delivery site (non-hospital setting) where higher level assessment, diagnostic and treatment services are provided for unscheduled clients who require immediate medical attention for injuries/illnesses that require more intensive human and technical resources than what is available in a physician's office or AACS unit. • Advanced Ambulatory Care Services (AACS) is a community-based service delivery site (non-hospital setting) where assessment, diagnostic and treatment services are provided for unscheduled patients seeking immediate medical attention for non-life threatening illnesses, typically patients of lower acuity than those treated in a UCC or ED. • Community Ambulatory Care Centre (CACC) is a community-based service delivery site (non-hospital setting) primarily engaged in the provision of ambulatory care diagnostic and treatment services. This includes typically scheduled primary care for clients who do not require hospital outpatient emergency care or inpatient treatment. • Public Health Centres include community health centres, community health clinics, district offices, public health, and public health centres. They provide services that are offered by public health nurses, including immunization, health education/counselling/support for parents, health assessment and screening to identify health concerns, and referral to appropriate healthcare providers such as physicians, and community resources.

Facilities by Zone

This section contains an overview of facilities that support healthcare throughout the province. A provincial and zone breakdown is provided.

Number of Facilities	South Zone	Calgary Zone	Central Zone	Edmonton Zone	North Zone	Provincial

Provincial Overview of Community-Based Capacity

Continued growth in community and home care capacity is the key to efficient system flow in emergency departments, acute care and community; it also allows patients to receive the most appropriate care in the most appropriate setting by the most appropriate care provider. Since March 2010, 8,660 net new continuing care beds have been added to the system.

As of...	Long-Term Care (LTC)	Designated Supportive Living (DSL)	Total Continuing Care	Net New LTC & DSL Beds	Net New Palliative Beds	Total Net New Continuing Care Beds
March 2010	14,429	5,089	19,518	-	-	-

Notes:

- Historical bed numbers have been updated with revised data.

- The number of beds above reflects AHS new capacity which has been staffed and in operation (patient placed into beds) during 2021-22. AHS is working with Alberta Health on a number of projects for additional capacity that did not open in 2021-22 but are planned to open in 2022-23. AHS does not include future capacity in any bed reporting.

Continuing Care

New Facilities

In 2021-22, new continuing care capacity was added at existing facilities in all zones including new facilities. The table below reflects where clients were placed from the AHS waitlists into the new facilities that opened.

New Facilities Opened in 2020-22	Zone	Location	Date Opened	Long-Term Care	Designated Supportive Living 4-Dementia	Designated Supportive Living 4	Total
Points West Living Red Deer (Phase II - Built adjacent to existing site - new Nursing Home)	Central	Red Deer	May 13, 2021	60	30	60	150

Addiction and Mental Health

The Addiction and Mental Health (AMH) portfolio co-ordinates, plans, delivers and evaluates a province wide network of AHS programs and contracted services. AMH works with a common purpose: to promote understanding and compassion, to encourage healthy behaviour and attitudes, and to help all Albertans achieve well-being throughout their lives. The tables below reflect the AHS addiction and mental health bed provincial capacity by zone and care stream. These represent AHS contracted facilities and do not include privately funded facilities.

AHS Addiction Beds

Pertains to beds and mats for clients with substance use and gambling problems. Includes detoxification, shelter mats, residential (short and long term, recovery), problem gambling and transitional beds. Also includes beds for Protection of Children Abusing Drugs (PChAD) program clients and residential beds funded through the Safe Communities Initiative (Safe Comm). Direct services provided by AHS as well as funded and contracted services. Excludes: Beds that are not funded by AHS (privately funded beds).

PChAD offers 28 residential detoxification and stabilization beds for high risk youth throughout the province. The 28 PChAD beds are included in the 239 publicly-funded child and youth mental health and addictions beds across the province. (Calgary-9, Red Deer-8, Edmonton-9, Grande Prairie-2.)

AHS Community Health Beds

Community Mental Health (CMH) supports home programs, community beds and other mental health community beds/spaces that deliver both transitional and permanent/long-term services to clients with varying mental health issues. In addition, CMH treats the clients behavioral, social, physical and medical needs.
