

MRI Desktop Menu

Function - The MRI Desktop menu gives access to all MRI routines and custom NPR reports.
Note: Menus may look different, this is an example only.

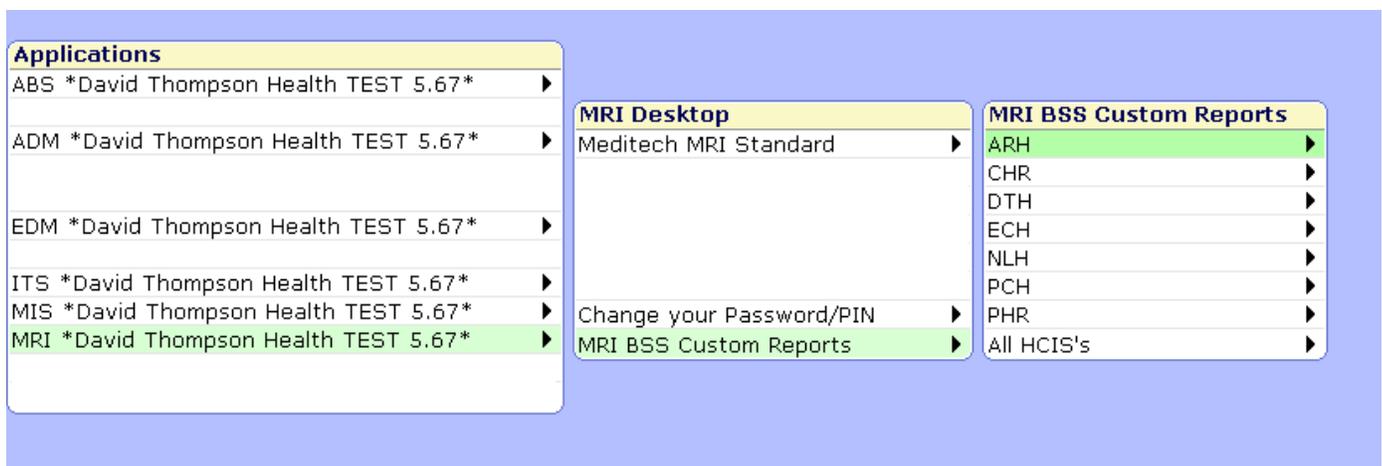

MRI Standard Menu:

The screenshot shows three overlapping dropdown menus on a light blue background. The 'Applications' menu is on the left, listing various health test categories like ABS, ADM, EDM, ITS, MIS, and MRI. The 'MRI Desktop' menu is in the center, with 'Meditech MRI Standard' selected. The 'Meditech MRI Standard' menu is on the right, listing options such as MPI Desktop, Incomplete Records Desktop, ROI Desktop, Locator Desktop, Patient Routines, Incomplete Record Routines, System Management, and Reports.

MRI BSS Custom Reports Menu:

Custom reports (aka NPR reports) can be found in the MRI BSS Custom Reports menu. This menu is currently organized by HCIS. Before Go Live, we hope to have this menu organized by MRI Feature – MPI/Demo Recall, DIU, ICR, ROI, Locator, Public Health and Misc. Re-organization of this menu should make the search for custom reports easier.

The screenshot shows three overlapping dropdown menus on a light blue background. The 'Applications' menu is on the left, listing various health test categories like ABS, ADM, EDM, ITS, MIS, and MRI. The 'MRI Desktop' menu is in the center, with 'MRI BSS Custom Reports' selected. The 'MRI BSS Custom Reports' menu is on the right, listing various report types such as ARH, CHR, DTH, ECH, NLH, PCH, PHR, and All HCIS's.
