AS EASY AS 1-2-3

using aseptic technique

BEFORE YOU BEGIN -

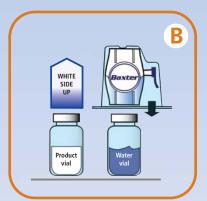

Bring vials to room temperature. Wash hands and put on gloves. Remove vial caps. Cleanse stoppers with alcohol swab and allow to dry.

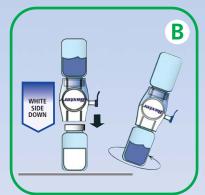

HOW TO MIX MORE THAN ONE **VIAL WITH A LARGE SYRINGE**

- Mix all product vials, using a new BAXJECT II device for each vial, as directed in Step 1 and Step 2
- Follow Step 3 to draw the product from each vial into the large syringe

The BAXJECT II device is intended for use with a single vial of product and is for single use only. Dispose of BAXJECT II as directed by your clinician.

- Place vials on hard flat surface
- Invert device over water vial (WHITE SIDE UP)
- Press down until **CLEAR** spike pierces water vial stopper

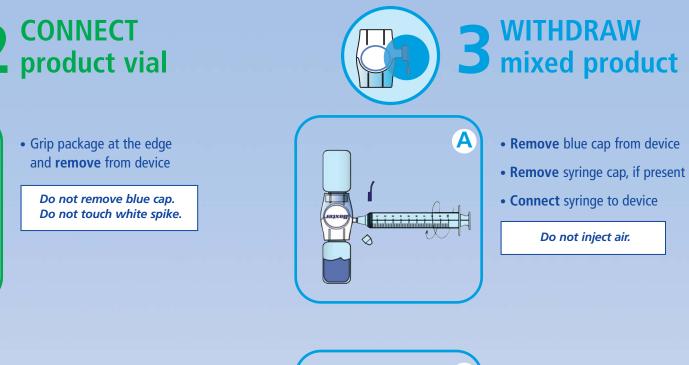

It is acceptable for a small amount of water to be left behind. If the water does not transfer successfully, please refer to Troubleshooting Information on the reverse side of this guide.

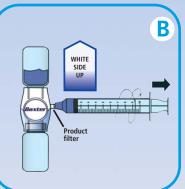

A

White = Product -Clear = Water -

- Invert device with water vial attached (WHITE SIDE DOWN, water vial on top)
- Press down until WHITE spike pierces product vial stopper
- Wait for water to enter product vial
- Swirl gently to dissolve product

- Invert device (WHITE SIDE UP, product vial on top)
- SLOWLY **pull** plunger back to withdraw mixed product
- **Disconnect** syringe

If you find it impossible to withdraw some or all of the mixed product into the syringe, there may be air in the device. Please refer to Troubleshooting Information on the reverse side of this guide.

TROUBLESHOOTING INFORMATION

do the following:

- **1** Place the WATER vial on the bottom
- 2 Identify the WHITE and CLEAR portion of the **Baxject II** device

White = Product

Clear = Water

- **3** Determine which side of the device is connected to the WATER vial:
 - If WATER vial is (correctly) connected to CLEAR side, go to SCENARIO A
 - If WATER vial is (incorrectly) connected to WHITE side, go to SCENARIO B
 - If you find it impossible to withdraw some or all of the mixed product into the syringe, there may be air in the device—go to SCENARIO C

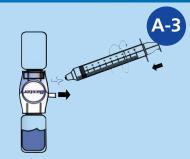

NOTE: IF THESE 3 TROUBLESHOOTING STEPS FAIL TO ADDRESS THE PROBLEMS YOU ARE HAVING, PLEASE CONTACT YOUR DOCTOR **OR LOCAL HEMOPHILIA TREATMENT CENTER**

> **BAXJECT II** Needle-less Transfer Device

SCENARIO The **WATER** vial is connected to the **CLEAR** side of the BAXJECT II device CORRECTLY

- A-1 SIDE DOWN
- A-2 WHITE SIDE DOWN 000
- Turn the device with vials attached so that the WATER vial is on top
- Remove the caps from the device and the syringe
- Connect the syringe to the device
- Pull the plunger back SLOWLY to withdraw any air from the vials
- This will force water into the PRODUCT vial

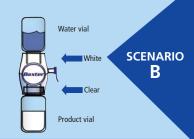

WHITE SIDE

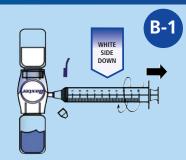

1111111111

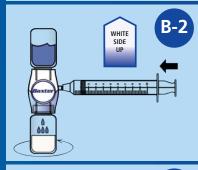

(A-4)

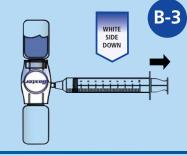

- Disconnect the syringe from the device
- Press the plunger to expel any air from the syringe
- Reconnect the syringe to the device
- Swirl gently until the product is completely dissolved

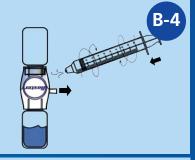

- A-5 • Turn the device with vials attached over so that the PRODUCT vial is on top
 - SLOWLY withdraw the prescribed amount of mixed product into the syringe
 - Disconnect the syringe

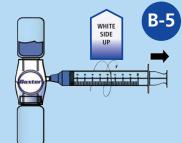

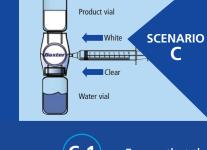

The WATER vial is connected to the **WHITE** side of the BAXJECT II device **INCORRECTLY**

- Keep the WATER vial on the bottom
- Remove the caps from the device and the syringe
- Connect the syringe to the device
- Pull the plunger back SLOWLY to withdraw any air from the vials
- Turn device with vials attached so WATER vial is on top
- SLOWLY press plunger to inject all air back into the vials
- This will force water into the bottom vial
- Swirl gently until powder is completely dissolved
- Turn the device with vials attached over so that the PRODUCT vial is on top
- SLOWLY withdraw all air into the syringe by pulling the plunger back
- This draws mixed product into the bottom vial
- Disconnect the syringe
- Press the plunger to expel all the air from the syringe
- Reconnect the syringe to the device
- Turn the device with vials attached over so that the vial containing mixed product is on top
- SLOWLY withdraw the prescribed amount of mixed product into the syringe

IF you have injected air into the vials in error

OR if you cannot withdraw the prescribed amount of mixed product and there is a significant amount left behind in the PRODUCT vial proceed as follows:

(C-1)

WHITE SIDE UP

(C-2)

WHITE SIDE DOWN

- Ensure that the PRODUCT vial is on top
- If you have withdrawn some product into the syringe, but cannot withdraw the full volume, inject all the mixed product in the syringe back into the device
- If you cannot withdraw any product into the syringe, go to Step C-2
- Turn the device with vials attached over so that the WATER vial is on top
- Now follow the instructions in Scenario A, starting with Step A-2
