Source: Population data values are for June 30 and are interpolations of actual population values from the Alberta Health Care Insurance Plan (AHCIP) Registration File as of March 31, 2007.
Note: The sum across age/sex groups, years, and public health service areas may not add up to totals due to rounding.

A word about the data

Edmonton and Area residents

The data used in this report are for people living in *Alberta Health Services - Edmonton and Area*. It excludes those people who may have received service in the region but reside outside the region. For example, there are many women who have their babies in *Edmonton and Area* but do not live in the area - these babies are not included in this report.

Public Health Service Areas

The public health service areas in Edmonton and Area are shown on the map on the inside front cover. Data are provided for the 15 areas.

Hospitalizations

The term hospitalization is used to mean hospital discharge as opposed to hospital admission. This is important when hospitalizations are compared across calendar years. For example, a person admitted to hospital in 2005 and discharged in 2006 will be counted among hospitalizations for 2006.

Federal Census Data

Federal census data released in 2006 are based on data collected in 2005.

Population

Population data values are for June 30. Values up to March 31, 2007 are interpolations of actual population values from the Alberta Health Care Insurance Plan (AHCIP) Registration File as of March 31 for each year.
