Expected Discharge Dates – Prescriber Essentials

The number one question patients and families ask is: “When am I going home?” What’s important to them should be important to clinicians.

Expected Discharge Date (EDD)

An inpatient's Expected Discharge Date (EDD) is the anticipated or estimated day that the patient should be ready to transition to the next care setting.

Helping set and revise an EDD is among minimum use expectations for prescribers in Connect Care. A value should be entered as soon as possible for all patients admitted to an inpatient facility.

EDDs can be continually revised, getting more precise as a discharge nears. Seeking team consensus facilitates Collaborative Care towards timely patient discharge or transfer.

Why EDD?

- ✓ EDDs help caregivers set priorities: “What do I need to do for this patient and when?”
- ✓ Consensus EDDs can more confidently be communicated to patients and families.
- ✓ EDDs help triage rehabilitation, diagnostic imaging, and other interventions affecting discharge.

Setting an EDD at Admission

- Enter/edit an EDD in an **admission order**
- Enter/edit an EDD in the **admission**
- Enter/edit an EDD when using a standard **History & Physical** document template

OR
navigator OR

Approximating EDDs

- Epic shortcuts make it easier to enter dates that transition planning actions.

Time to EDD Interval	Entry in EDD edit box
≤ 1 day to transition	T+1
< 3 days to transition	T+2
< 5 days to transition	T+4
< 10 days to transition	T+9
10+ days to transition	T+15

trigger key

Reviewing and Revising EDDs

- Use the “Exp Disch Date” column in **patient** (double-click to edit).
- OR
- Use the Daily Checklist or Discharge Planning blocks within the chart **sidebar** EDD to edit).

lists (double-
