

Sliding Hip Screw or Dynamic® Hip Screw Repair

You have had a repair done with a sliding hip screw or Dynamic® hip screw which involves placing a screw up the femoral neck to the head of the femur then linking it to a plate that runs alongside the femur and is held in place with 1-4 small screws.

Movement Precautions

If pins, screws, nails, or plates were used to repair your broken hip, do not put more weight on the operative side than your Doctor, Nurses or Therapists say you can.

Use a pillow between your legs for comfort when you are lying in bed.

How much weight can you put on your repaired leg:
