

PAIN, AGITATION & DELIRIUM IN ALBERTA

WE ARE MAKING A DIFFERENCE!

PAIN

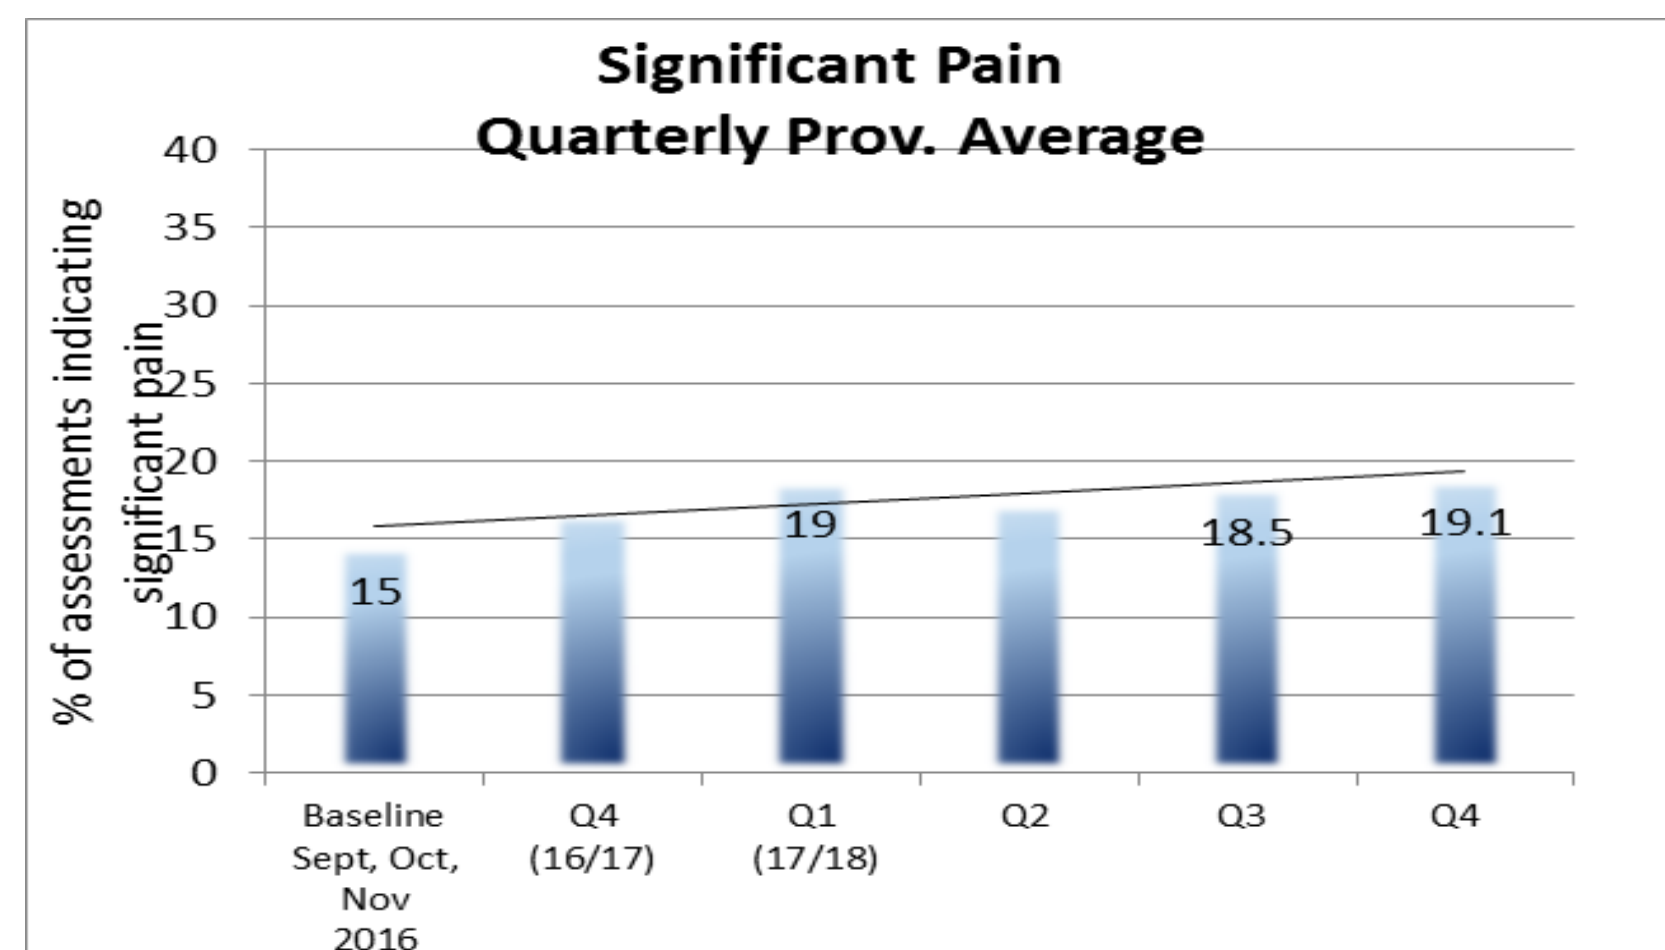

8% improvement in the compliance of completing q4hr pain assessments on all ICU patients

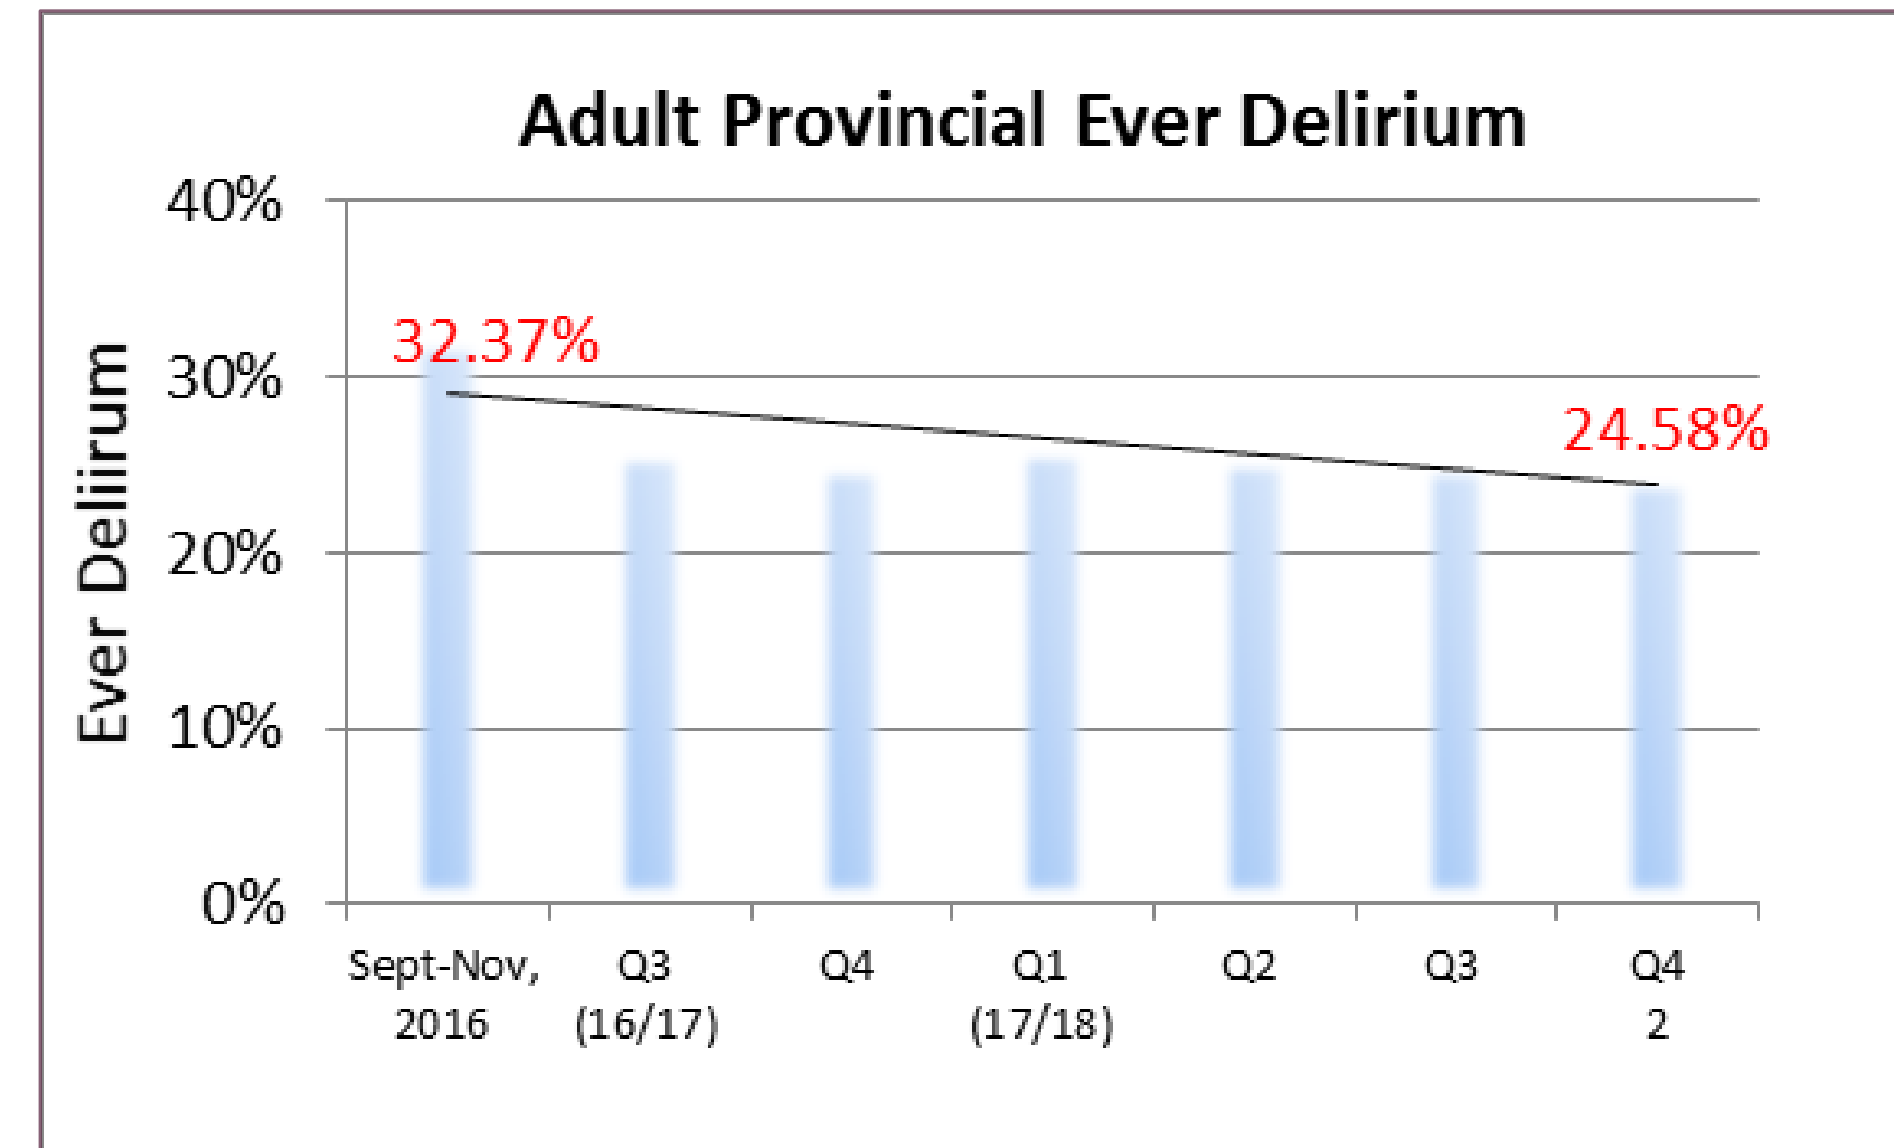

Remember * this only captures assessments charted within a pain scale ...does not include comments made.

MANAGEMENT OF PAIN

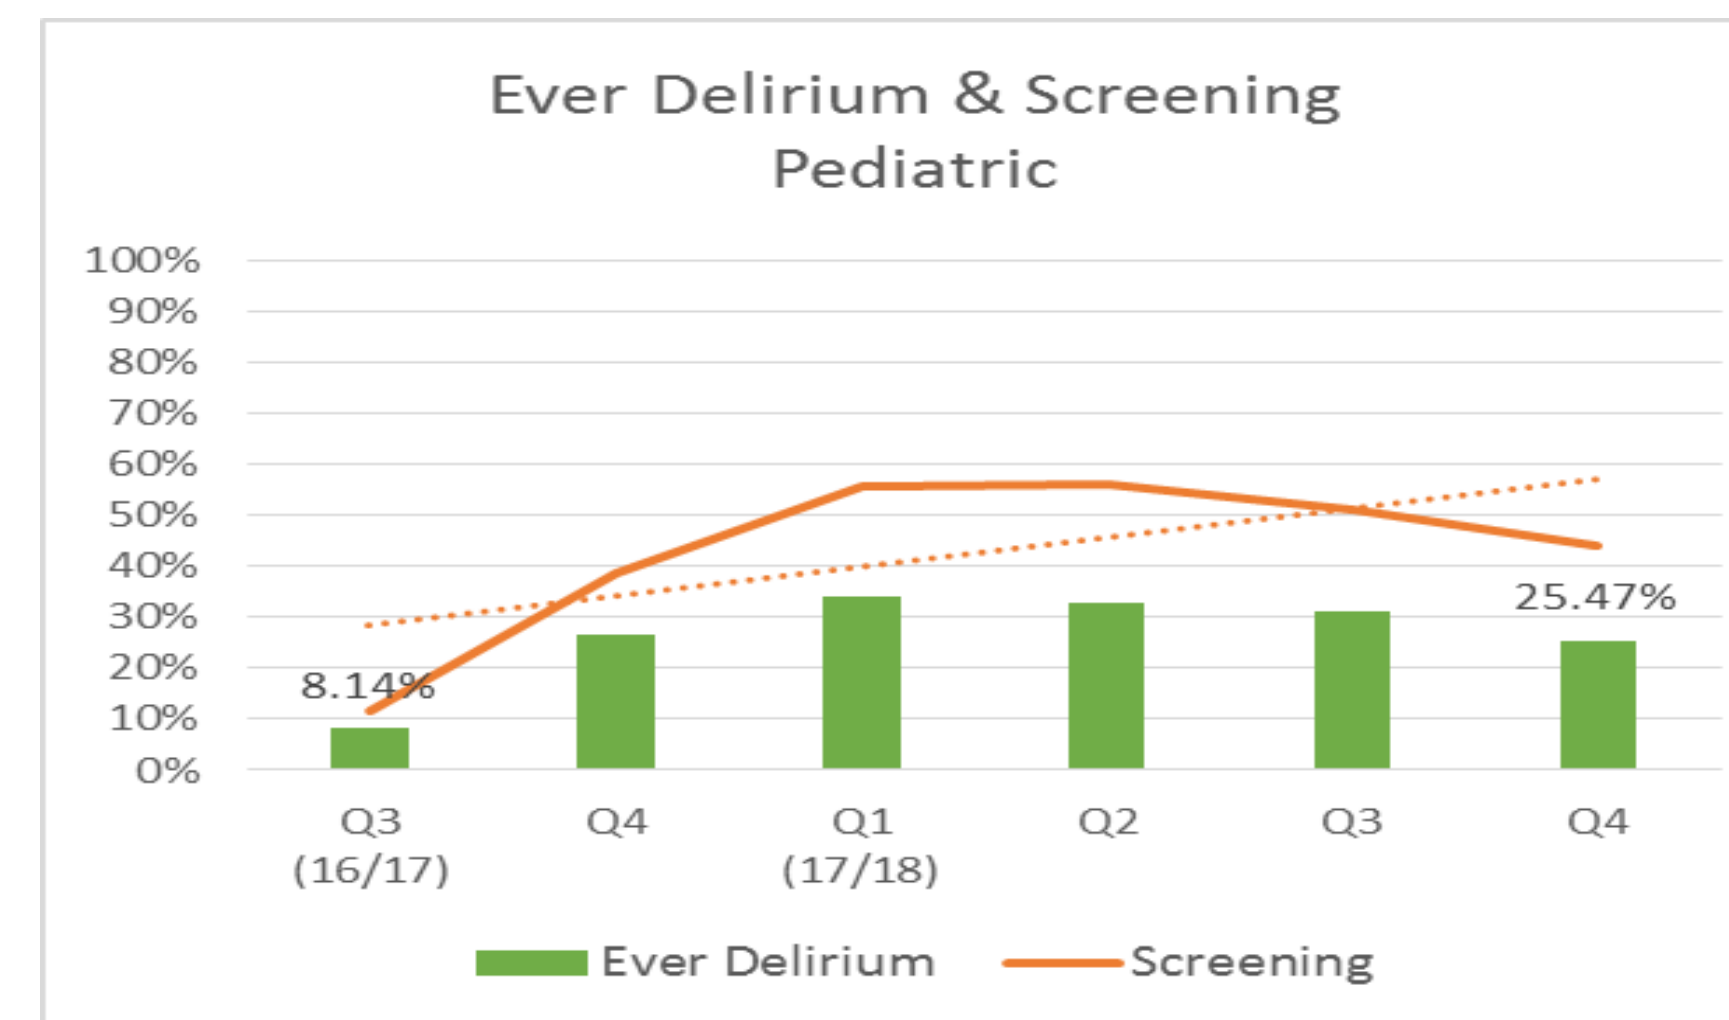

- Treat pain first & minimize sedatives!
- Assess pain **minimum of q4h** and chart in MetaVision using CPOT, NRS, VAS or FLACC scales.
- Document the **reassessment of pain** using CPOT, NRS, VAS or FLACC scales, post intervention.
- Pre-procedural pain management
- Non-pharmacological pain management interventions

DELIRIUM

7.8% reduction in proportion of patient days with delirium in Alberta adult ICUs

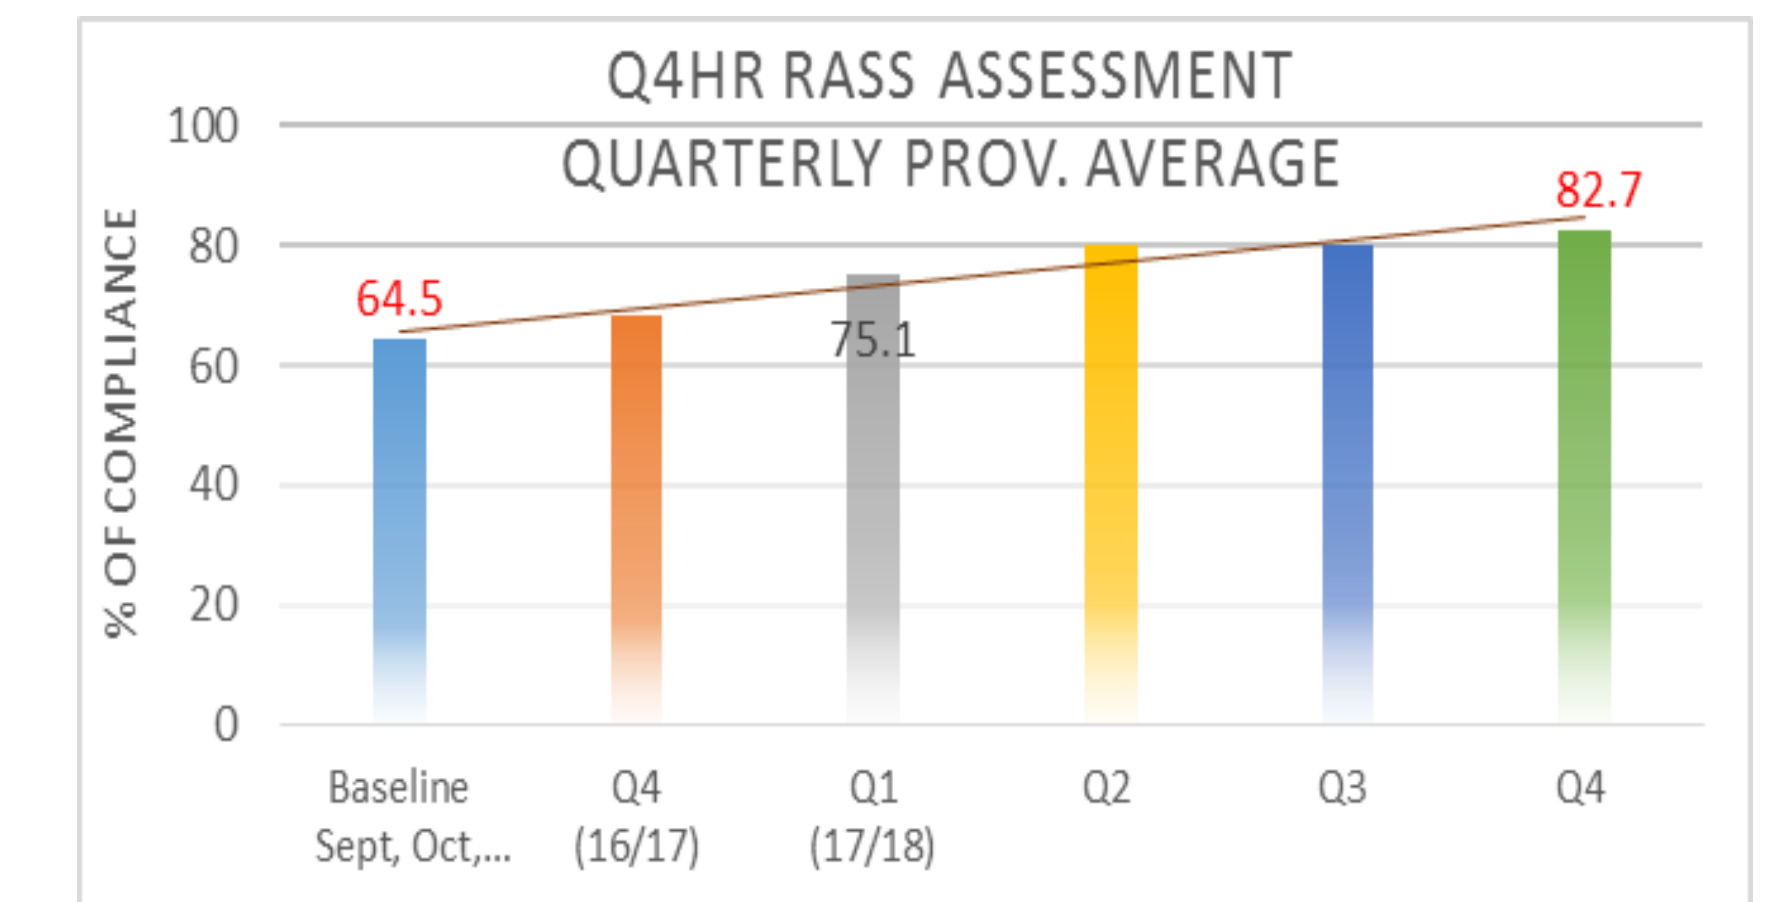

Screening for delirium has increased by 32% since last year!

COMING SOON!

- MetaVision release 5.4 June 26th
- Extubation Readiness Trial documentation (peds)- April 25th
 - New Mobility documentation for Pediatric and Adult
 - Improvements to ICDSC form with revised definitions and guidance for delirium screening
- My Health Alberta webpage
- ICU Delirium- information for patients & families
- Monthly Webinars- A different topic each month!

AGITATION

q4h RASS assessments have improved by 12% since 2016
