

# Checklist of Supplies: Preparing for a Hospital Visit with an Insulin Pump

- Complete the *Insulin Pump Information Sheet* prior to a procedure or before admission to hospital, if able: <http://www.albertahealthservices.ca/frm-20114.pdf>  
*If you need help in finding the information requested on your pump, call the 1-800 number for your pump company. If you do not have this information, pump therapy may be replaced with multiple daily injections in hospital.*
- Infusion Sets or PODS (plan for 1-2 sets/day in case of insertion site failure or procedures where the infusion set cannot be worn, etc.)
- Extra Tubing *if required for specific pumps*
- Insertion Device *if used*
- Batteries
- Alcohol Swabs
- Barrier Wipes, Adhesive wipes or Adhesive Remover
- Blood Glucose Meter
- Blood Glucose Test Strips or Glucose Sensors
- Lancing Device and Lancets
- Ketone Test Strips (Blood or Urine) *check expiry date*
- Insulin glulisine (Apidra®) is not a stocked insulin in hospital- if you use this insulin you need to bring your own\*\*  
*\*\* (aspart (NovoRapid®) and lispro (Humalog®) are available in hospital)\*\**
