

# Workshop Offer: Improving Chronic Kidney Disease in the Community Using Health Information Technology

The Kidney Health Strategic Clinical Network is pleased to partner with the Nephrology Research Groups at the Universities of Calgary and Alberta to offer this learning workshop to staff working within Primary Care Networks (PCN) throughout the province.

## Who will benefit from this workshop?

Primary care physicians, residents, nurses, pharmacists, clinic managers, referral coordinators, clinic assistants and other interested individuals.

## Workshop Description:

This interactive workshop focuses on tools to support appropriate identification, medical management and referral of patients with chronic kidney disease (CKD) including the [CKD Pathway](#) and Nephrology Advice Request. We will also discuss strategies to leverage existing disease management dashboards or queries to proactively identify and recall Comprehensive Annual Care Plan (CACP) eligible patients (depending on EMR functionality).

- Participants will interact with integrated health technology tools to improve care delivery and outcomes for patients with chronic kidney disease.
- Participants will learn how to access these evidence-informed point-of-care tools and engage in active learning exercises such as case studies, guided tool usage, and group work.
- Interactive workshops range between 1 hour to 1½ hours and are available either in-person or via videoconference.
- This Group Learning program has been certified by the College of Family Physicians of Canada for up to **2 Mainpro+ credits**.

## Participation Requirements:

- Completion of online pre-workshop survey
- Completion of online post-workshop survey
- Laptop or Tablet with ability to connect to the [CKD Pathway](#) and [eReferral portal](#)

**If you are interested in scheduling** a workshop or if you would like more information, contact us at [kidneyhealth.scn@ahs.ca](mailto:kidneyhealth.scn@ahs.ca)
