Risk Assessment for Managing Adult Patients in Addiction and Mental Health Units/Facilities

Does the patient exhibit any signs and symptoms of infection (e.g. cough, diarrhea, fever, rash, etc.) and/or infectious disease?

Yes

Refer to the IPC Diseases and Conditions Table, and algorithms for Rash, GI Illness, Respiratory Illness, and Wound/Soft Tissue infection

No

Does the patient meet ALL of the following criteria?

- Drainage and bodily fluids are contained (e.g. wounds can be covered)
- Patient does NOT exhibit behaviors which could promote transmission of pathogens to others such as soiling of their environment and/or frequent contact between hands and potentially infectious areas of the body

Yes

Low Risk

Routine Practices

No

High Risk

Refer to the IPC Diseases and Conditions Table and Point of Care Risk Assessment

Patient risk should be reassessed daily and as needed when behaviors or conditions change

Accommodation options for patients on Additional Precautions:

1. Place in a private room with a dedicated bathroom. If a private room is not available, place in a semi-private room with a dedicated bathroom and block one bed.

2. If the above options are not available, use the IPC Guidelines for Cohorting Isolation Patients to determine if cohorting is possible. You will find the guideline at [http://www.albertahealthservices.ca/info/Page15147.aspx](http://www.albertahealthservices.ca/info/Page15147.aspx)

   Consult IPC for further guidance with Cohorting

   Note: If a patient is assessed as low risk and therefore managed with Routine Practices, an isolation clean is not required.

### Participation in group activities and accessing common areas
