Flo Slomp, PhD

- Faculty of Medicine & Dentistry, Department of Medicine, University of Alberta
- Research Affiliate, Glenrose Rehabilitation Hospital

Research Interests:

- Impact of decompression strengthening interventions on functional spinal outcomes.
- Mobility and disability interventions and innovations.
- Decreasing the risk of transitioning from acute to chronic pain.
- Influence of the therapeutic relationship on clinical outcomes.
- How subjective tools implementation impacts the interpretation of knowledge.
- Integrating community facilities in promoting affective changes in complex trauma.

Inspiration/Vision Statement:

Dedicated to developing and implementing policy and clinical practices to reduce the unnecessary suffering of inadequate pain management. Recognition and education of the therapeutic approach as an essential component of pain management.

Clinical Implications of Research:

- Interpreting pain scores within their biopsychosocial context.
- Managing pain from a biopsychosocial approach.
- Ensuring that chronic pain is listed as one of the potential risks/outcomes of surgeries.
- Pain education for patients/families and caregivers.
- Reducing the risk of acute pain transitioning into chronic pain.
