

Connect Care

List of Billing Software Vendors

Below is a list of software vendors that AHS has met with about the benefit to their clients of building new functionality that eliminates manual data entry of claim information by billing professionals or physicians.

Definition of Terms:

Data transmission via sFTP – The vendor is planning on establishing secure file transfer protocol (sFTP) transmission between AHS and themselves so that on a nightly basis AHS can, with the Medical Staff member's permission, push all the data that Alberta Health needs for a claim to the vendor who then imports the data on behalf of their clients.

Data Extract includes Scheduling – Depending on the vendor's system design – the scheduling information collected and stored in Connect Care for appointments and operating rooms can also be extracted and provided to vendors.

Vendor/Software	Functionality Vendor Plans to Enable	
	Data Transmit via sFTP	Data Extract Includes Scheduling
AMA Physician Locum Services	Yes	No
Medi-Com	Yes	No
Microquest/Healthquest	Yes	Yes
Remedy Billing	Yes	No
ResolvMD	Yes	No
Statgo Billing Services	Yes	No

Import manually – Some Billing Software Vendors have created an import function for physicians to use. If the physician extracts their Service Code Capture data using the Connect Care “My Billing Code” report as a csv file, this can be manually uploaded by a software user into application. Another method is that software clients would send a csv file to the vendor and the vendor will import it. Talk to your Billing Software Vendor to find out if these options are available to you.
