Connect Care Update

Over 1500 subject matter experts (SMEs) and participants from across Alberta met in Edmonton Aug 14-16 for the second of three Adoption/Validation Sessions.

Earlier this year during the Direction Setting Sessions, participants made thousands of decisions that we have used to build parts of the Connect Care clinical information system (CIS). Adoption/Validation sessions are an opportunity see how AHS' configuration of the Epic software is taking shape. This is to make sure we're on the right track and to discuss what could still be improved.

The second Adoption/Validation Session was a chance for the SMEs to make additional decisions for future system improvements to enhance workflows, and will ultimately improve how the system will be used to support our day-to-day work. From these sessions, a vision will emerge of what Connect Care might look like when it is in place.
