Background

Connect Care is Alberta Health Services' (AHS) provincial Clinical Information System (CIS). It serves as the bridge between information, healthcare teams and patients. The foundation of Connect Care is a common clinical information system, which will directly impact everyone who provides patient care within AHS. Physicians working at AHS healthcare centres use Connect Care to access schedules, patient clinical documentation and financial information such as insurance.

Background of Extract

Physicians would like to have a way to send a daily extract list of patient details for patients that physician has seen. This report will help the physician track and bill for the patients they have seen and provided services to.

Emergency Department Physician Daily Shift Data Export

The AHS Emergency Department (ED) Daily Shift Detailed Report Extract captures records of all patients who arrived in the ED who saw the attending physician in date range as configured. The information captured in this extract enables potential reconciliation against the billing information. The layout of Physician Appointment extract is listed in the table below under Specification.

Specification

The maximum number of rows returned for each report is currently set at 10,000.

ED Physician Daily Shift Detail Export Specification

Seq. #	Element Name	Description	Data Type	Length (range)	Format	Valid Values
1	Patient	Patient Name	Varchar	100	First Name Last Name	e.g., Bob Davidson
2	CSN	Unique Contact Serial Number for the appointment or encounter	Varchar	50	12 Digit Number	e.g., 40xxxxxxxxxx
