CONCURRENT DISORDERS INPATIENT SERVICES

Specialized inpatient program for the stabilization of co-occurring severe mental illness and severe addiction issues. Patients participate in stabilization treatment, supportive concurrent recovery, and development of functional and coping skills necessary to live in their home community environments. These include, individual and group therapy (skill building), and specialized concurrent disorder focused programming to support recovery. Outpatient services have historically been attempted but are not successful in achieving client defined level of recovery.

EXCLUSIONS:

- Individuals need to be independent with activities of daily living with limited support.
- Emotional and cognitive functioning must be assessed as sufficiently stable for individuals to participate and benefit from the 4-6 hours of individual or group therapeutic interventions provided.
- Disorders outside of the program mandate: Schizophrenia, Schizoaffective Disorder, Psychotic Disorder, Substance Induced Psychotic Disorder, Psychotic Disorder Not Otherwise Specified, Amnestic and other Cognitive Disorders.
- Unstable psychiatric status: Emotional and cognitive functioning must be assessed as sufficiently stable for individuals to fully participate and benefit from the therapeutic interventions provided.

Both Sites

- Acute detox need: Adults in need of acute detox will not be accepted such as acute alcohol withdrawal. However, if an individual's withdrawal needs can be safely managed at the Centre, we can provide a medically supervised slow taper for opioids and benzodiazepines.
- Unstable medical conditions: Individuals need to be medically stable to participate and engage in all aspects of the program.
- Individuals who have a Warrant of Detention.
