

Injection Sites for Routine Immunizations

For Parents/Guardians who Wish to Use Anaesthetic Creams, Gels, or Patches for their Infant/Preschool Age Children

If you wish to use an anaesthetic cream, gel, or patch (medicine that numbs the skin) for routine immunizations, talk to your pharmacist and bring this handout with you. The pharmacist can help choose the right product for your child, show you how to use it safely, and talk about possible side effects. You will need to put on the anesthetic cream, gel, or patch on your child before coming to the immunization appointment. If you remove the cream, gel, or patch before you see the nurse, use a pen to draw a circle around the area that was numbed.

This chart shows the usual injection sites used by public health nurses in Alberta to help you and the pharmacist know where the numbing medicine will need to be put. However, be aware that there is a chance that injection sites may change when the nurse sees your child.

More vaccines may be needed if your child has a medical condition or is 1 or more visits behind schedule (e.g., 6 month old who has not had 4 month immunizations). Talk to a public health nurse before the appointment to find out where vaccines will need to be given.

Routine Visit	Number of Injections	Usual Injection Sites (Shown by Shaded Area in Diagrams A, B & C) on Page 2
2 month visit	2	<ul style="list-style-type: none"> Both legs as shown in Diagram A
4 month visit	3	<ul style="list-style-type: none"> Both legs as shown in Diagram A (Two injections will go in one leg, and 1 into the other)
6 month visit	1 +1 if getting influenza vaccine	<ul style="list-style-type: none"> One leg as shown in Diagram A (Both legs if your child is also getting influenza vaccine)
12 month visit	3 +1 if getting influenza vaccine	<ul style="list-style-type: none"> Both arms as shown in Diagram B On one arm, the 3rd injection will go in the area of the arm shown in Diagram C One leg as shown in Diagram A if getting influenza vaccine
18 month visit	1 +1 if getting influenza vaccine	<ul style="list-style-type: none"> One arm as shown in Diagram B (Both arms if getting influenza vaccine)
4 to 6 year preschool visit	2 +1 if getting influenza vaccine	<ul style="list-style-type: none"> One arm as shown in Diagram B (Both arms if getting influenza vaccine) An injection will also go in the area of the arm shown in Diagram C

Upper Arm (Subcutaneous)

Check with a pharmacist or public health nurse if you are unsure where to put the anesthetic cream, gel, or patch. The nurse can only use the area that was numbered if the anesthetic cream, gel, or patch was in the right place.
