The Central Zone IPC hand hygiene team worked closely with the Central Zone Accreditation Consultants to provide hand hygiene status reports to the managers of sites and/or areas that were on the spring visit list. With conflicting priorities due to COVID-19, many of the listed sites had not performed hand hygiene reviews or had lost their site-based reviewer. We provided a report to the managers of the last hand hygiene site-based reviewer for the site and/or area and the date of their last review. Those sites that were identified as not meeting the required organizational practice were required to report back their action plan to the Accreditation team. As a result of this collaborative effort amongst the IPC Hand Hygiene team, the Central Zone accreditation team and clinical operations, several new reviewers were identified and trained to collect hand hygiene observations.
