

Alberta Pediatric RSV Prevention Program

Eligibility Criteria 2023-2024

1. Premature: less than or equal to **29 6/7 weeks gestational age** born after April 30, 2023 and less than 6 months of age as at November 01, 2023.
2. Premature: **30 0/7 - 32 6/7 weeks gestational age** born after August 31, 2023.
3. Premature: **33 0/7 - 35 6/7 weeks gestational age** and born after September 30 2023.
4. All Infants born after September 30, 2023, and answers yes to one of the following questions.
 - Does the family live more than 2 hours from the nearest hospital that provides bronchiolitis treatment?
 - Does the family live in a remote location with no permanent road access? (i.e. Fox Lake)
5. Premature: less than or equal to **35 6/7 weeks gestational age and less than 2 years of age** as at November 01, 2023 with chronic lung disease as evidenced by:
(Check all applicable factors)
 - Home oxygen after April 30, 2023
 - On long term prophylaxis or a recent exacerbation needing systemic steroids

Details:

Point of emphasis: Please provide indication for use of oxygen i.e., CLD, pulmonary hypertension and current oxygen supplement requirement- type and flow and concomitant medications. Requirement for oxygen due to central apnea or obstructive sleep apnea are **not** indications for use of RSV Immunoprophylaxis.

6. Severe hemodynamically significant congenital heart disease: **age less than 1 years of age** as at November 01, 2023 **Provide specific diagnosis and/or cardiac medications:**

For subsequent seasons children with persistent congenital heart disease will be considered by the RSV Medical Director.

Point of emphasis: Confirmation by a cardiologist is required to verify the congenital heart defect as hemodynamically significant. Examples of eligible and non-eligible cardiac lesions are listed below.

Eligible	Non-Eligible
Pulmonary Hypertension	Uncomplicated or small ASD and VSD
Tetralogy of Fallot	Patent Ductus Arteriosus
Hypoplastic Left Heart Syndrome	Pulmonary Stenosis
Cyanotic Heart Disease Congestive Heart Disease	Uncomplicated Aortic Stenosis
Atrio-Ventricular Septal Defect	Mild Coarctation of the Aorta
Interrupted Aortic Arch Transposition of the Great Arteries	

Alberta Pediatric RSV Prevention Program Eligibility Criteria 2023-2024

7. Tracheostomy: **age less than 2 years of age** as at November 01, 2023. Prophylaxis may be considered in those **age less than 4 years** as at November 01, 2023 if ventilator dependent.
8. Trisomy 21: age less than 2 years of age as at November 01, 2023.
9. Other categories in term or preterm infants: age **less than 2 years of age** as at November 01, 2023. including:

- persistent requirement for home oxygen due to pulmonary hypertension, chronic lung disease, meconium aspiration or gastro-esophageal reflux disease

Point of emphasis: Requirement for oxygen due to central apnea or obstructive sleep apnea are **not** indications for use of RSV Immunoprophylaxis.

- congenital anomaly of airway i.e. trachea-esophageal fistula, congenital diaphragmatic hernia, Pierre Robin Sequence
- congenital anomaly of the lung i.e. congenital pulmonary airway malformation, interstitial lung disease
- significant immunodeficiency. **Exception with no age restriction:** severe combined immunodeficiency, stem cell transplant or bone marrow transplant first year post transplant.

Point of Emphasis: In the event the SCT/BMT occurs during the RSV season i.e. January or February and the first-year post-transplant strides two RSV seasons. RSV immunoprophylaxis will be provided for the first season and second season at the request of the referring physician.

- neuromuscular disorders. **Exception with no age restriction:** spinal muscular atrophy type 1 weighing less than 15 kg

10. Other conditions not listed above, physician referral only. Please include supporting documentation. Requires approval from an Alberta RSV Prevention Medical Director
