

Community based naloxone kit distribution

Monthly tracking tool

This optional reporting tool can be used to support monthly naloxone kit reporting at the beginning of each month. Count the current number of community based naloxone kits; this should equal the number of kits reported at the end of the previous month. When kits are ordered, add the number of kits ordered to this tool to maintain the kit numbers. The number of people trained and number of reported reversals can be gathered from the daily or weekly community based naloxone kit distribution tools.

At the end of the month, **total # of kits distributed = # of kits at start of the month + # of kits ordered – # of kits at the end of the month**

Month	# of kits at start of the month	# of kits ordered	# of kits end of the month	# of kits distributed	# of people trained	# of reported reversals	# of expired kits	Notes
