## Principles for Usage and Deployment of Devices for Virtual Visitors

- Patients/clients should be encouraged to use their own devices whenever possible.
- Priority for AHS devices should be given for patients/clients who are palliative or in environments where no visitation is allowed.
- AHS devices must have their history wiped clean after each patient/client usage.
- AHS devices will be deployed based on size of facilities and identified need, and based on the availability of existing devices.
- Each site is accountable for the security, management and cleaning of devices.
- These devices are shared devices and not assigned, therefore we may have to limit usage time.
