

Patient and Designated Family/Support Person(s) arrive at site

Designated Family/Support Persons arriving to the hospital will undergo screening upon entering the hospital upon each entry as per site and unit processes and based on the AHS [Daily Fit for Work or Essential Visitor Screening Questionnaire](#). All patients and their Family/Support Person(s) should be taught hand hygiene and given a mask to wear according to guidance on visitor requirements available in the [COVID-19 Essential Visitor and Designated Family/Support Guidance](#).

Patient presents for Maternity Care: Triage staff to wear IPC-guided PPE

Ask all patient and support persons to perform hand hygiene, then proceed with screening. All patients and their Family/Support Person(s), are screened according to site and Zone guidance. Admitted patient screening should use the [AHS Acute Care COVID-19 Expanded Testing Algorithm](#) and be documented in the [AHS Communicable Disease \(Respiratory\) Initial Screening tool](#). The following [F.A.Q.](#) may help health care workers implementing this Algorithm. Screening of Family/Support Person(s) should follow site/zone guidance and be noted in patient's chart.
