

**#WeAreNotWaiting**  
*(Solving the problem as **a patient**)*

@DanaMLewis

**Getting diagnosed with a chronic  
disease is like being struck by  
lightning.**

**@DanaMLewis**

Food, hormones, sickness, stress

Insulin, exercise, sickness, stress

**@DanaMLewis**

# The current tools are not perfect....

Continuous Glucose Monitor (CGM)

Insulin Pump

**@DanaMLewis**

# Leaving us often with this:

	<p>4-Jul</p> <p>salad</p> <p>frozen dinner</p> <p>cheese &amp; crackers</p>		<p>7-Jul</p> <p>banana</p> <p>hamburger, salad, ice cream</p> <p>steak/rice/beans bowl</p>
	<p>5-Jul</p> <p>bacon &amp; eggs</p> <p>chicken &amp; rice</p> <p>larabar &amp; sausage</p>		<p>7/8 - 4 mile run, transmitter died</p> <p>9-Jul</p> <p>bacon &amp; eggs</p> <p>tomato soup</p> <p>cheese &amp; cracker:</p>
	<p>6-Jul</p> <p>banana</p> <p>doritos</p> <p>ham/cheese lettuce wrap with yogurt, cheetos</p> <p>steak &amp; potato</p>		<p>10-Jul</p> <p>yogurt</p> <p>bacon &amp; eggs</p> <p>chicken &amp; rice</p> <p>fondue</p>

**If we can't change  
existing devices...**

**what if we could  
add *\*new\** tools?**

**@DanaMLewis**

# From reactive to predictive: an “open loop”

@DanaMLewis

**We already have in  
our pockets the tools  
needed for an  
“artificial pancreas”.**

**@DanaMLewis**

# Components of an open source artificial pancreas

- **Continuous glucose monitor**

- **Insulin pump**

**@DanaMLewis**

# Components of an open source artificial pancreas

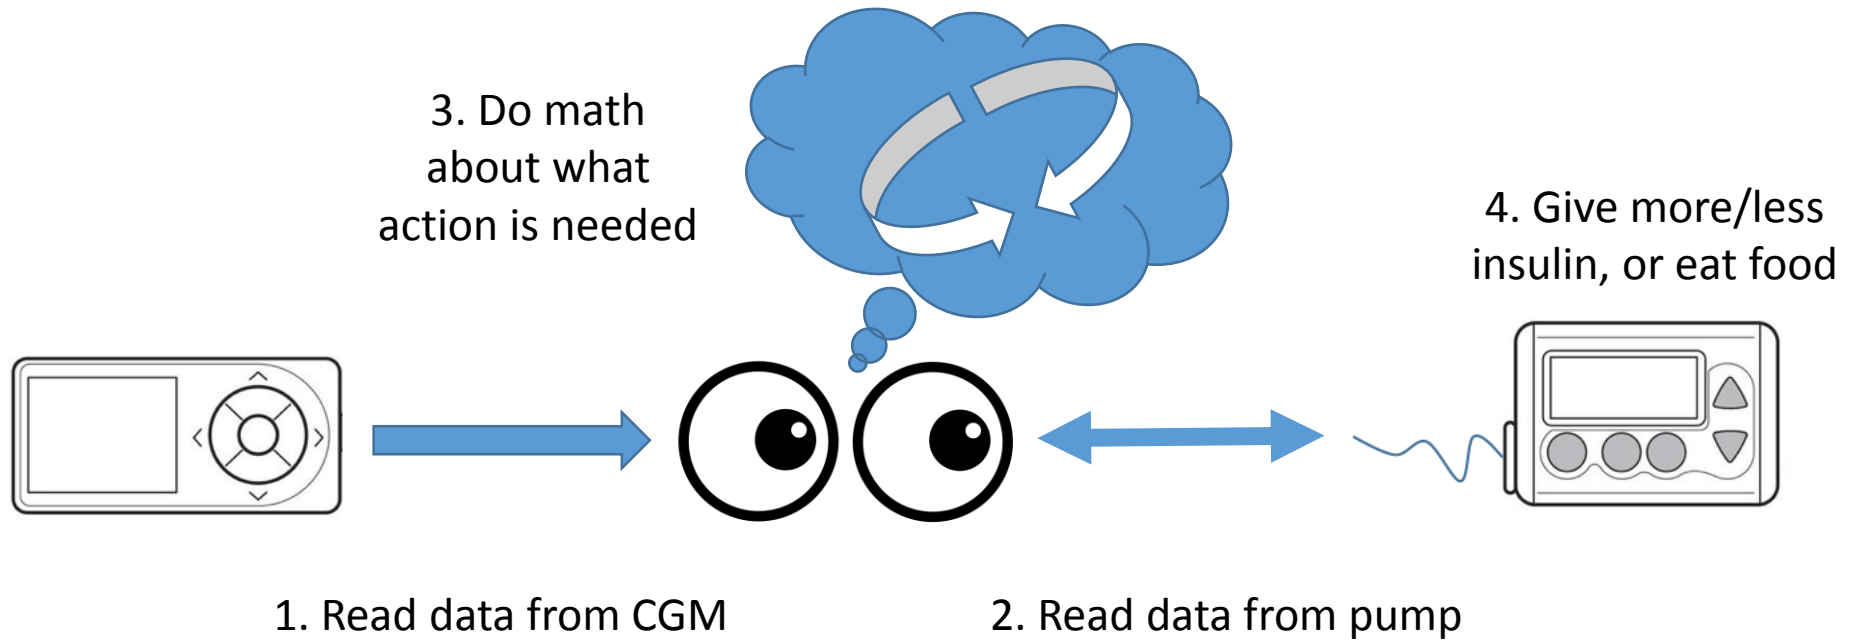

1. Continuous glucose monitor
2. Computer (“controller”)
3. Battery
4. Radio stick (“translator”)
5. Insulin pump

(Illustration by Clint Ford for Popular Science)

**@DanaMLewis**

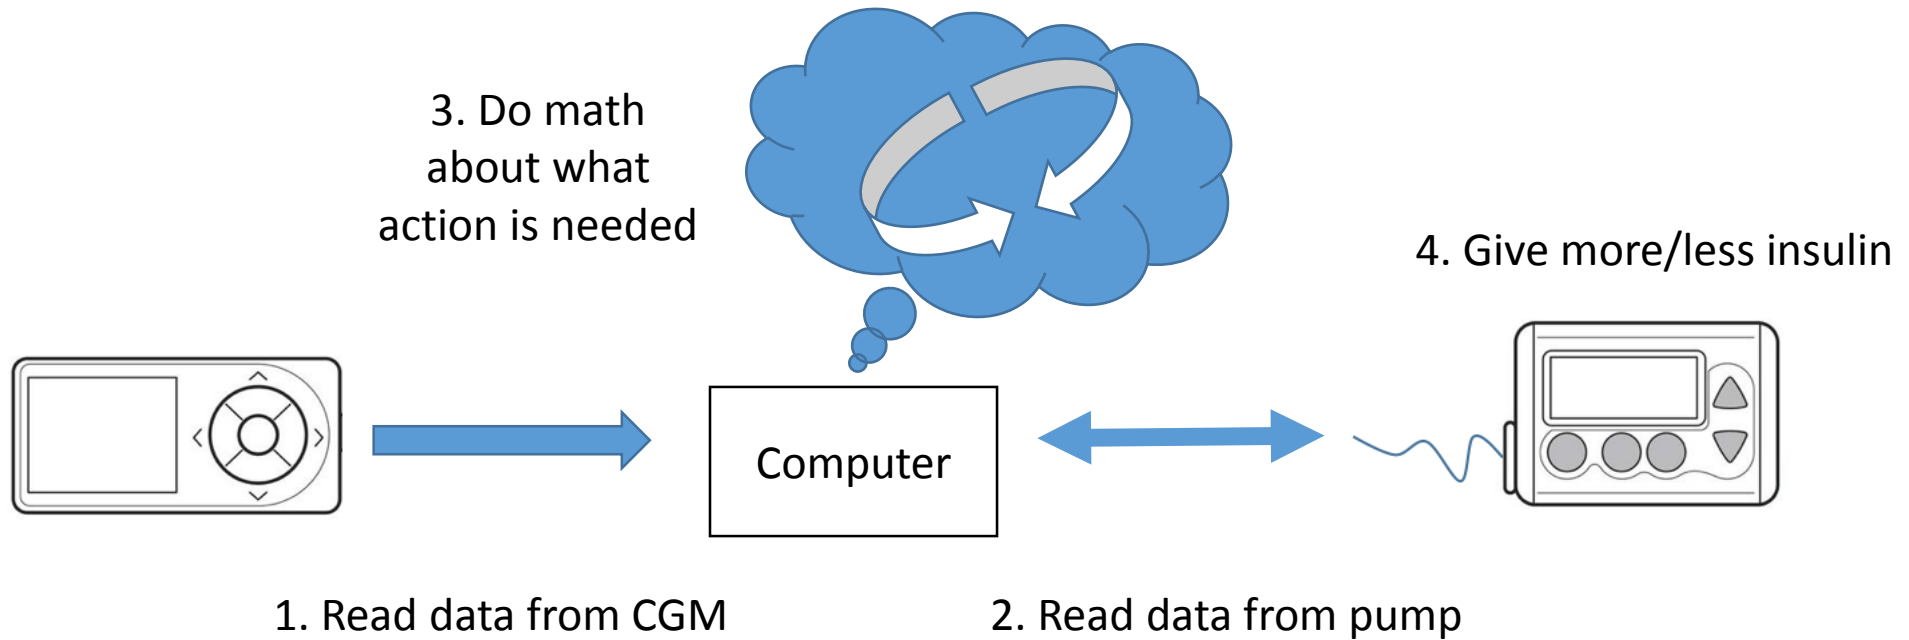

# Manual diabetes:

**5. Do it again.. and again... and again...**

**@DanaMLewis**

# Automated diabetes:

**5. Do it again.. and again... and again...**

(human doesn't have to pay constant attention, but still checks in from time to time)

**@DanaMLewis**

Before:

After:

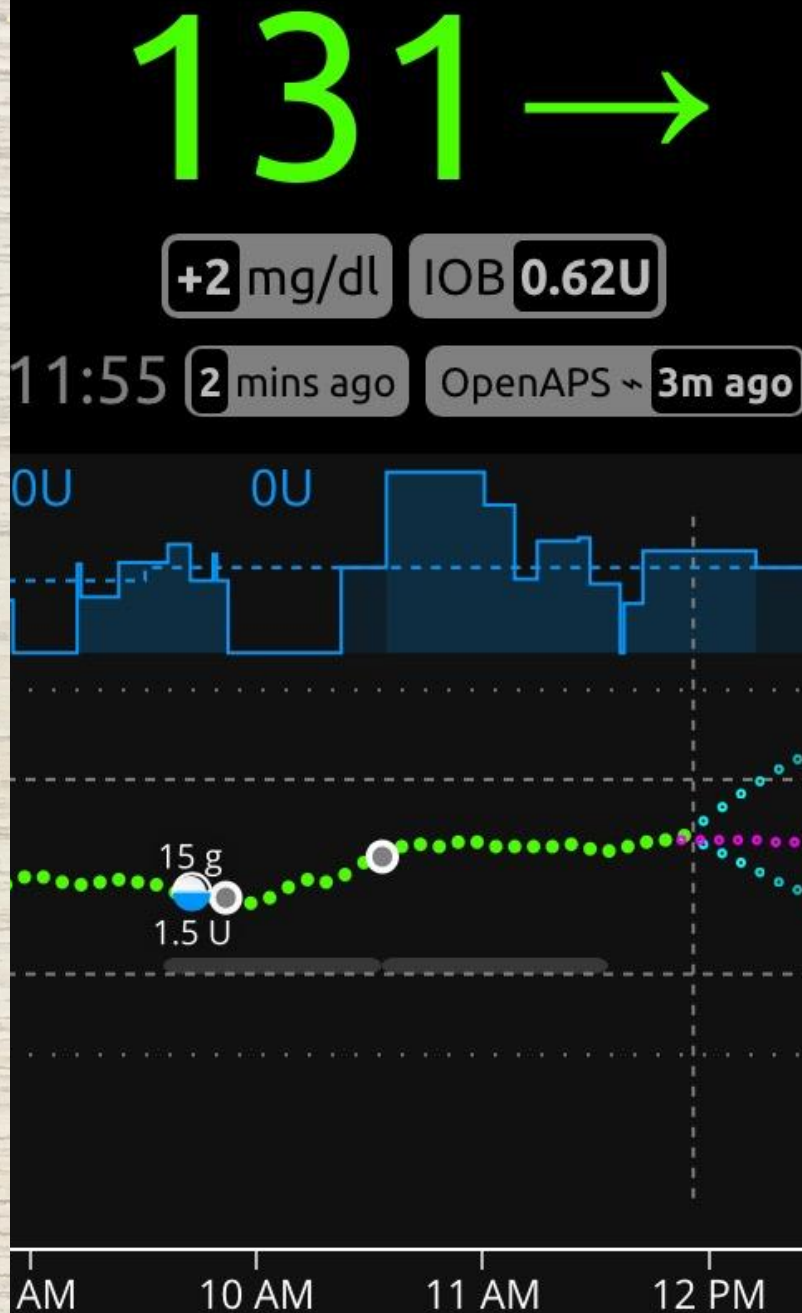

OpenAPS "rig"

@DanaMLewis

[www.OpenAPS.org](http://www.OpenAPS.org)

# Do-It-Yourself (DIY)

Building, making, or combining disparate tools into a solution that works for yourself.

Often done when no commercial solution exists; or commercial solutions are not accessible; or because commercial solutions are not good enough to meet the needs of the individual.

**@DanaMLewis**

# #OpenAPS

*is an open and transparent effort to  
make safe and effective basic  
Artificial Pancreas System (APS)  
technology widely available to  
reduce the burden of Type 1 diabetes.*

**@DanaMLewis**

# #OpenAPS:

Taking the DIY, artificial pancreas from (n=1) to (n=1)\*many by:

- Focusing on safety
- Limiting dosing ability in hardware and software
- Using same dosing calculations a person would use
- Responding (or not) to unexpected data
- Tolerating communication failures
- Failing back safely to standard device operation

Reference design, code, documentation at [OpenAPS.org](https://OpenAPS.org)

There are now  $(n=1) * 916+$   
people with DIY closed loops in the world.

(That's something like  
**7,000,000+**  
hours of DIY closed loop experience.)

@DanaMLewis

# OpenAPS

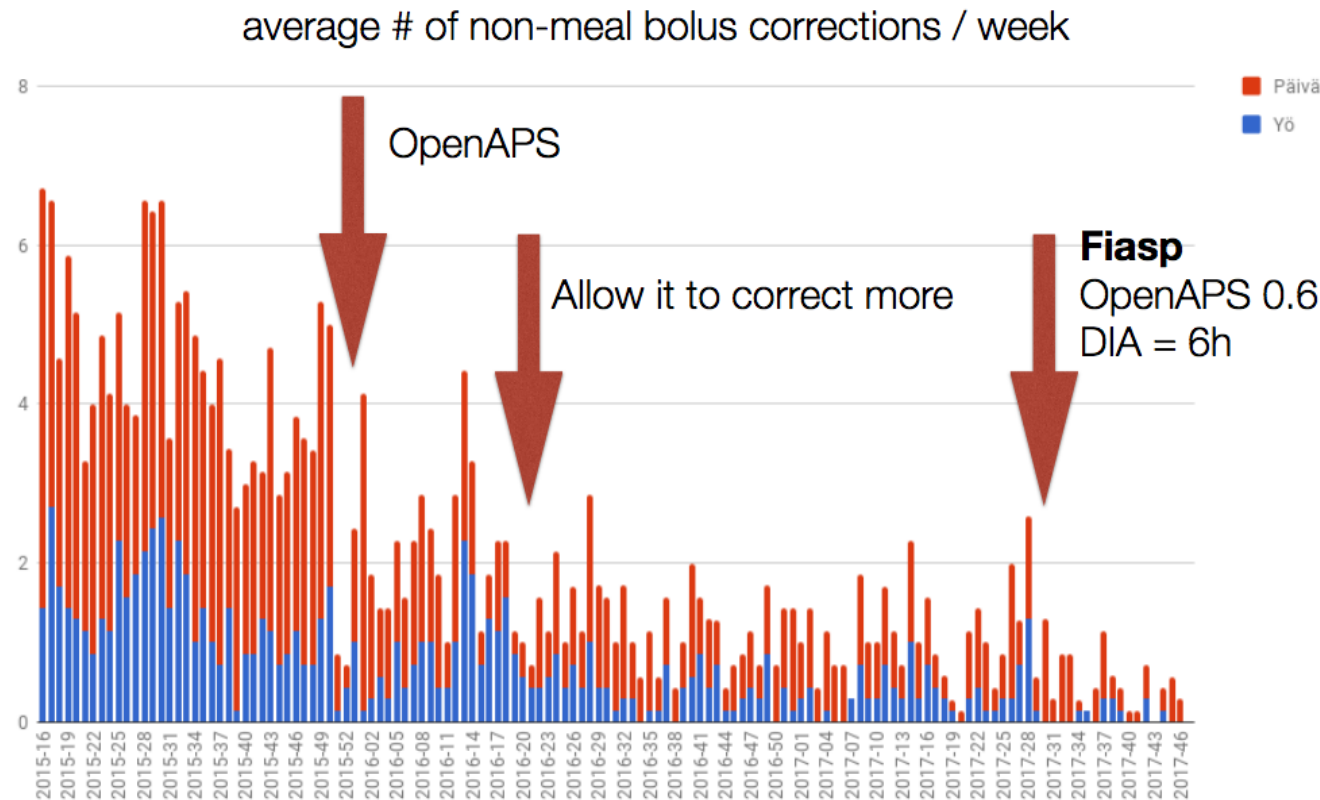

**Sustained  
improvements  
in average BG**

# @sulka script assessing changes in treatments

<https://github.com/sulkaharo/oref0-tools>

**Pre-OpenAPS:**  
4.5 manual  
interventions/  
day

**2018:**  
0.7 manual  
interventions/  
day  
(85%  
reduction)

# @jbwittmer on QOL improvements of #OpenAPS:

- Annual School Nurse visits
  - 4<sup>th</sup> grade - before OpenAPS -- **420 visits** (2.3/day)
    - 354 “routine” visits for pre-lunch or pre-gym checks and decisions
    - 66 visits for hypo- or hyper-glycemic events
  - 6<sup>th</sup> grade - with OpenAPS – **5 visits** (0.027/day)
    - 3 gym-class associated hypoglycemic events
    - 2 equipment malfunction (CGM/OpenAPS rig)

# Not traditional..

- Engineers
- Programmers
- Scientists
- Researchers
- Rocket Scientists

# But yet we are:

- Engineers
- Developers
- Scientists
- Researchers
- Inventors

@DanaMLewis

(Me, anytime  
someone says  
“but you’re not a  
\_\_\_\_\_”.)

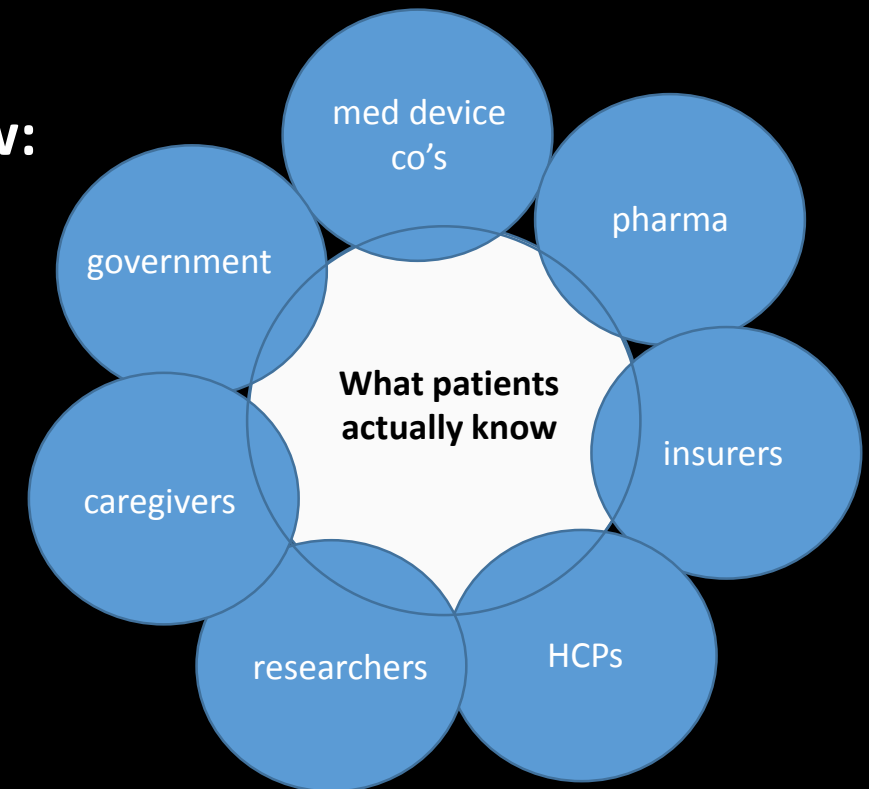

# Make sure patient-centered research is actually patient-centered

1. Involve patients at every step – from design to contextualizing results appropriately.
2. Don't fall into the imposter syndrome/patient syndrome trap:

## Imposter syndrome:

## What people think patients know:

Traditional innovation

@DanaMLewis

How companies approach solutions:

How patients approach solutions

@DanaMLewis

**How might the world change  
if we leverage these  
collective innovations  
that happen every day?**

@DanaMLewis

What happens when we  
**enable patients to prioritize**  
what we research and design  
solutions around?

@DanaMLewis

What happens when we  
**surface and share data openly**  
so anyone – regardless of “role”  
or credentials – can use it to  
improve things?

@DanaMLewis

What if we all say  
**#WeAreNotWaiting**  
to change the world like this?

@DanaMLewis

# **#WeAreNotWaiting**

**to change the future of healthcare.  
But we can do it faster, together.**

## **Will you help us?**

**#OpenAPS | @DanaMLewis | [www.DIYPS.org](http://www.DIYPS.org) | [www.OpenAPS.org](http://www.OpenAPS.org)**
