Klebsiella pneumoniae complex	231		R	94	98	93 ^b		95				93			27	90	98	97		
Morganella morganii ^a	38		R	R		R	R					92		R	R	84	100	97	100	100
Proteus mirabilis	137		69	96	100	98 ^b		99				90		R	R	91	75	94		
Pseudomonas aeruginosa	170			R	91			R	93			R			R	85		98	R	96

^a These organisms usually produce β-lactamase which can cause failure of 3rd generation cephalosporin therapy, despite in vitro susceptibility
^b Urine isolates only
^c Susceptibility to doxycycline can be inferred from susceptibility to tetracycline

Note: Percent susceptible for each organism/antimicrobial combination was generated by including the first isolate of that organism recovered from a given patient during the time period analyzed.

Abbreviations: MSSA - methicillin-susceptible Staphylococcus aureus; MRSA - methicillin-resistant Staphylococcus aureus; ESBL - extended spectrum beta-lactamase; R - intrinsic resistance
