Antifungal % Susceptibility Patterns: Candida - Sterile Calgary zone January - December 2019

Data derived from routine susceptibility tests performed by Alberta Precision Laboratories

		n	Fluconazole*	Voriconazole	Micafungin	Amphotericin B
Yeast	<i>Candida albicans</i>	62	98	98	100	100

*Susceptible interpretation based on high dosage of Fluconazole (800 mg/day in normal renal function)

Note: Percent susceptible for each organism/antimicrobial combination was generated by including the first isolate of that organism recovered from a given patient. Only those species with at least 30 isolates are included in the antibiograms.
