From: APL Transfusion Medicine

Re: New Transfusion Service Identification Number (TSIN) System

#### PLEASE POST OR DISTRIBUTE AS WIDELY AS APPROPRIATE

## **Key Messages:**

- A new provincial Transfusion Service Identification Number (TSIN) System is being implemented across the province in a staggered approach.
- Central Zone fDTH sites will go live with the provincial TSIN system on June 7, 2022.
- TSIN implementation for remaining Central Zone sites (fECH) will be determined closer to Connect Care Launch 6.
- RDRHC pre-admission clinic will continue to use the current blue form Meditech# 3028066 and red wristband until go live on Connect Care.

#### Why this is important:

- The most common root cause of acute hemolytic transfusion reactions is a clerical error or other error in patient identification.
- A TSIN system ensures unequivocal identification of patients and their crossmatched blood from "vein-to-vein". This means it ensures a traceable connection from the patient's pretransfusion type and screen specimen, through testing in the transfusion medicine lab and through the transfusion of compatible red blood cells.
- The new provincial TSIN system allows for standardization of the system across the province, supports bedside and laboratory Connect Care workflows, and will eventually support the ability to provide transfusion services across zone boundaries when Connect Care is live in all areas.

Supplies Needed (Provided by Laboratory)						
Meditech #3029550	Transfusion Service Identification Number Form					
Meditech #3029548	Band Patient ID General White Plastic 3 inch x 1 inch					

## **Action Required:**

- Any staff who will collect pretransfusion type and screen specimens must be trained.
- Follow the pretransfusion type and screen collection procedure on the back of the form to properly identify the patient, label the specimens, and complete the TSIN form. Improperly or incompletely labelled specimens will be rejected and require recollection.

## Inquiries and feedback may be directed to:

Carole Ann LaGrange, Transfusion Safety Officer, Central Zone <a href="mailto:CaroleAnn.LaGrange@aplabs.ca">CaroleAnn.LaGrange@aplabs.ca</a>

#### This bulletin has been reviewed and approved by:

Patricia Boutilier, Sector Transfusion Medicine Manager Dr Robby Wang, Central Zone Transfusion Medicine Medical Lead

#### **New TSIN Form:**

- 1. Apply specimen label to the TSIN form or complete manually
- 2. Collector and Witness Identify the patient. Witness documents their ID on the TSIN form 3. Collector records their ID, collection date and time
- 4. Place specimen labels below TSIN barcode on each tube label

Apply tube label horizontally on each specimen tube

5. Record the collection date on the wristband
