Re: Shiga Toxin-Producing *Escherichia coli* (STEC) testing

PLEASE POST OR DISTRIBUTE AS WIDELY AS APPROPRIATE

Key Message:

- Effective June 3, 2019, Chinook Regional Hospital microbiology laboratory will begin testing for **Shiga toxin-producing *Escherichia coli* (STEC)** on **all stool cultures**.

Why this is important:

- Previously, routine stool culture tested for only the O157 serotype.
- Now, both O157 and non-O157 serotypes will be detected. All STEC serotypes will be reported as "Shiga toxin-producing *E. coli*".
- Additionally, the report will indicate if the isolate produces Shiga toxin (Stx) 1, Stx2, or both.

Background:

- Shiga toxin-producing *E. coli* (STEC) is a cause of diarrheal disease, and may cause the development of hemolytic-uremic syndrome (HUS).
- The use of antibiotics may increase the risk of development of HUS.
- Infections with STEC producing Stx2 are more likely to cause HUS than those producing Stx1.
- If further information regarding STEC and HUS is needed, please refer to:
<https://www.albertahealthservices.ca/assets/info/hp/diseases/if-hp-dis-ecoli-stec.pdf>

Action Required:

- No change to ordering or collection is needed. Refer to the Chinook Regional Hospital Guide to Services for collection instructions.

Inquiries and feedback may be directed to:

- Deb Sweeney, CRH Microbiology Tech III 403-388-6108, Deborah.Sweeney@albertapubliclabs.ca
- Dr. Wilson Chan, Medical Microbiologist, 403-770-3338, Wilson.Chan@albertapubliclabs.ca
